# ECI-100 & Engine Interfacing

15<sup>th</sup> January 2020

VERSION – ECI-100 & Engine Interfacing - 13012020

# ECI-100

## Universal Engine & Control Interface

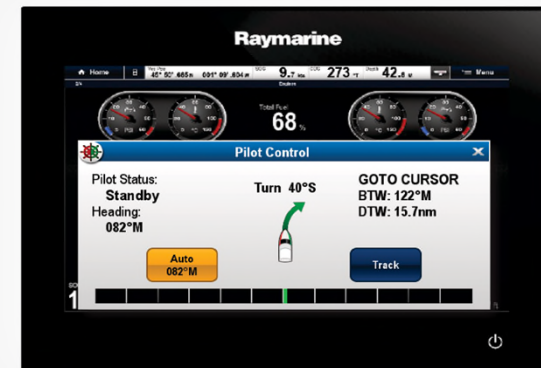

(July 2018)

# ECI-100 Key Features

- Used as Drive by Wire Engine Gateway (Volvo etc.)
- Supports NMEA2000 & J1939 to display Engine data
- Converts J1939 to NMEA2000
- Opto. Isolates STNG/NMEA2000 and engine CAN BUS networks
- Fuel flow Rate Management
- Power isolated Engine and Seataalk NG bus
- Diagnostic sign-of-life LEDs for each port
- Compact unit for mounting in tight locations
- Compatible with Raymarine's latest MFDs:
  - aSeries
  - cSeries
  - eSeries
  - gS Series

*Running LightHouse v8 or later*

# ECI-100 System Diagram

ECI-100 Engine and Control Interface (ECI) System Diagram

# ECI-100 – Product Specification

## Power specification

|                               | SeaTalk <sup>ng</sup> | Engine CAN bus (DeviceNet)   |
|-------------------------------|-----------------------|--|
| Nominal supply voltage        | 12 V dc               | 12 to 24 V dc  |
| Operating voltage range       | 10.8 V to 16 V dc     | 10.8 V dc to 31.2 V dc   |
|                               | SeaTalk <sup>ng</sup> | Engine CAN bus (DeviceNet)   |
| Current                       | 12 mA                 | <ul style="list-style-type: none"> <li>• 12V — 12.5 mA</li> <li>• 24V — 11 mA</li> </ul> |
| Load Equivalency Number (LEN) | 1                     | N/A  |

CAN Address - 205

## Parts supplied

The following items are supplied with your product.

| Item | Description   | Quantity |
|------|---|----------|
|      | ECI-100 (Engine & Control Interface)                      | 1        |
|      | DeviceNet connector dust cap                              | 1        |
|      | 400 mm (1.3 ft) SeaTalk <sup>ng</sup> spur cable (A06038) | 1        |
|      | Document pack   | 1        |
|      | Mounting screws   | 2        |

| Connector | Connector             | Connects to:   | Suitable cables  |
|-----------|-----------------------|--|--|
|           | SeaTalk <sup>ng</sup> | SeaTalk <sup>ng</sup> using the supplied spur cable. | SeaTalk <sup>ng</sup> spur cables. Refer to <a href="#">Chapter 9 Spares and accessories</a> .       |
|           | DeviceNet             | Engine CAN bus.                                      | Engine specific DeviceNet adaptor cable. Refer to <a href="#">Chapter 9 Spares and accessories</a> . |

# ECI-100 & Cables – Ordering information

E70227 - ECI-100 Engine & Control Interface

Optional engine specific cable kits simplify installation

- E70240 – Volvo EVC Link cable (1m)
- E70241 – Volvo EVC “Y” loom
- E70242 – Yamaha Command Link+ cable
- E70305 – Caterpillar Gauge Y cable
- E70260 – DeviceNet male to female cable (2m)

## Engine specific adaptor cables

| Description                                   | Engine connector | ECI connector | Part number |
|---|------------------|---------------|-------------|
| Volvo EVC link cable – 1 m (3.3 ft)           |                  |               | E70240      |
| Yamaha Command Link Plus cable – 1 m (3.3 ft) |                  |               | E70242      |

| Y-- Cables  | Engine connectors | Adaptor cable / ECI-100 connector | Part number |
|---|-------------------|-----------------------------------|-------------|
| <b>Description</b><br>Volvo Y-Loom cable – 1 m (3.3 ft) / 500 mm (1.5 ft)       |                   |                                   | E70241      |
| <b>Description</b><br>Caterpillar Y-Loom cable – 1 m (3.3 ft) / 500 mm (1.5 ft) |                   |                                   | E70305      |

# ECI-100 Supported Data

- ECI-100 identifies parameters including:
  - Engine speed
  - Engine oil temperature
  - Engine temperature
  - Engine oil pressure
  - Engine coolant pressure
  - Engine fuel rate
  - Boost pressure
  - Battery potential
  - Transmission oil pressure
  - Transmission oil temperature
  - Total engine hours
  - Fuel tank level
  - Alternator potential
  - Engine torque
  - Engine percent load
  - Transmission gear
- Trip fuel used (calculated by ECI-100)
- VIN (not shown on the display)
- Software number (not shown on the display)

# ECI-100 – Data parameters supported

| SUPPORTED J1939 to NMEA2000 BRIDGED DATA PGN's |    |                 |  |
|--|----|-----------------|--|
| J1939  | to | NMEA2000 / STNG | ENGINE PARAMETER                         |
| 61443  |    | 127489          | % Load                                   |
| 61444  |    | 127488          | RPM                                      |
| 65203 / 65266                                  |    | 127489          | Fuel Rate                                |
| 65226  |    | 127489          | Alarms                                   |
| 65253  |    | 127489          | Engine Hours                             |
| 65262  |    | 127489          | Oil & Coolant Temperature                |
| 65263  |    | 127489          | Oil / Coolant / Fuel Delivery Pressure   |
| 65270  |    | 127488          | Boost                                    |
| 65271  |    | 127489          | Alternator Voltage                       |
| 65272  |    | 127493          | Transmission Oil Temp. & Pressure & Gear |
| 65276  |    | 127505          | Tank Levels                              |

| SUPPORTED NMEA2000 to NMEA2000 BRIDGED DATA PGN's |    |                 |  |
|---|----|-----------------|--|
| NMEA2000  | to | NMEA2000 / STNG | ENGINE PARAMETER   |
| 127488  |    | 127488          | Engine RPM, Tilt & Boost   |
| 127489  |    | 127489          | Oil Temp & Pressure. Hours, Alternator, Fuel Rate, Coolant Pressure, Fuel Pressure Alarms, Load & Torque |
| 127493  |    | 127493          | Transmission Oil Temp and Pressure & Alarms & Gear   |
| 127497  |    | 127497          | Trip Fuel Used, Fuel Rate  |
| 127505  |    | 127505          | Tank Levels  |
| 65300   |    | 127489          | Yanmar Proprietary data  |

# Typical systems

Single ECI-100 for single or multiple engine where one CAN bus is used:

- Volvo EVC
- Yamaha
- Suzuki

Either system can support NMEA2000

ECI-100 for each engine for systems with dedicated CAN bus systems for each Engine:

- CAT / MAN/ MTU (J1939) etc.
- CAT – Connects to 6 pin Display port

# Planning Installation & Important Notes

- Confirm Engine Type & Compatibility
- Confirm number of Engines
- Confirm Engine CAN data type (NMEA2000 or J1930)
- Confirm if Engines run on one bus - (One or multiple ECI-100 required?)
- Confirm Alarms supported & required. (ECI-100 supports proprietary alarms)
- Confirm Engine data supported & required
- Disconnect any other Engine Gateways
- ECI-100 must be powered from both sides (engine/STNG)
- ECI-100 may not be required if Engines run on NMEA2000
- ECI-100 will not be required if other manufacturers Gateway are used
- ECI-100 will only pass through Engine data (Does not bridge GPS data etc.)
- ECI-100 will provide more accurate fuel used and remaining data

# J1939 & NMEA2000 Engine Data PGNs Received by ECI-100

| Engine Parameter              | Received from engine bus |           | Transmitted (ECI-100 to SeaTalk <sup>ng</sup> ® bus) |
|-------------------------------|--------------------------|-----------|--|
|                               | J1939                    | NMEA 2000 | NMEA 2000  |
| Engine Speed                  | 61444                    | 127488    | 127488   |
| Engine Hours (run time)       | 65253                    | 127489    | 127489   |
| Engine Oil Temperature        | 65262                    | 127489    | 127489   |
| Engine Coolant Temperature    | 65262                    | 127489    | 127489   |
| Engine Oil Pressure           | 65263                    | 127489    | 127489   |
| Engine Coolant Pressure       | 65263                    | 127489    | 127489   |
| Engine Fuel Delivery Pressure | 65263                    | 127489    | 127489   |

| Engine Parameter                       | Received from engine bus |                 | Transmitted (ECI-100 to SeaTalk <sup>ng</sup> ® bus) |
|--|--------------------------|-----------------|--|
|  | J1939                    | NMEA 2000       | NMEA 2000  |
| Engine Fuel Rate                       | 65266                    | 127489          | 127489   |
| Engine Boost Pressure                  | 65270                    | 127488          | 127488   |
| Battery Voltage (Alternator potential) | 65271                    | 127489 / 127508 | 127489 / 127508                                      |
| Transmission Oil Pressure              | 65272                    | 127493          | 127493   |
| Transmission Oil Temperature           | 65272                    | 127493          | 127493   |
| Fuel Tank Level                        | 65276                    | 127505          | 127505   |
| Vehicle Direction/Speed                | 65256                    | 127250          | 127250   |

# ECI-100 – Engine Alarms support

- NMEA2000 standard engine alarms.
- J1939 Engines use proprietary Alarms & may not be supported - unless tested by Raymarine!

| SUPPORTED NMEA2000 & J1939 ALARMS |                            |   |
|-----------------------------------|----------------------------|---|
|                                   | NMEA2000 ALARMS SUPPORTED: | J1939 ALARMS SUPPORTED:                         |
|                                   | Over Temperature,          | High Coolant Temperature Warning                |
|                                   | Over Temperature           | Engine Oil Temperature High                     |
|                                   | Low Oil Pressure,          | Low Oil Pressure Warning                        |
|                                   | Low Oil Level,             | Low Oil Level Warning                           |
|                                   | Low Fuel Pressure,         | Low Fuel Pressure Warning                       |
|                                   | Low System Voltage         | System Voltage Below Normal                     |
|                                   | Low System Voltage         | Battery Voltage Below Normal                    |
|                                   | Low Coolant Level,         | Low Coolant Level Warning                       |
|                                   | High Boost Pressure,       | Very High Boost Pressure                        |
|                                   | Rev Limit Exceeded,        | Engine Over speed Warning                       |
|                                   | Over Temperature,          | High Transmission Oil Temperature Warning       |
|                                   | Low Oil Pressure,          | Low Transmission Oil Pressure Warning           |
|                                   | Water in Fuel              | Water in Fuel Indicator                         |
|                                   | Charge Indicator           | Charging System Error                           |
|                                   | Low Fuel Pressure          | Rail Pressure Low                               |
|                                   | Throttle Position Sensor   | Accelerator Pedal Position Failure (Throttle 1) |
|                                   | Sub or Secondary Throttle  | Accelerator Pedal Position Failure (Throttle 2) |
|                                   | Check Engine               | High Fuel Temperature                           |
|                                   | Preheat Indicator          |   |
|                                   | EGR System                 |   |
|                                   | Engine Emergency Stop Mode | <b>TRANSMISSION ALARMS:</b>                     |
|                                   | Warning Level 1            | Check Transmission                              |
|                                   | Warning Level 2            | Over Temperature                                |
|                                   | Power Reduction            | Low Oil Pressure                                |
|                                   | Maintenance Needed         | Low Oil Level                                   |
|                                   | Engine Comm. Error         | Sail Drive                                      |
|                                   | Neutral Start Protect      |   |
|                                   | Engine Shutting Down       |   |

# J1939 & NMEA2000 Engine Alarm PGNs Received

## Alarms

| Engine Parameter         | Received from engine bus |           | Transmitted (ECI-100 to SeaTalk <sup>ng</sup> ® bus) |
|--------------------------|--------------------------|-----------|--|
|                          | J1939                    | NMEA 2000 | NMEA 2000  |
| High Coolant Temperature | 65226                    | 127489    | 127489   |
| Low Oil Pressure         | 65226                    | 127489    | 127489   |
| Low Oil Level            | 65226                    | 127489    | 127489   |
| Low Battery Voltage      | 65226                    | 127489    | 127489   |
| Low Coolant Level        | 65226                    | 127489    | 127489   |

## NMEA2000 PGN supported by MFD (Axiom)

| PGN    | Description                            | Transmit | Receive |
|--------|--|----------|---------|
| 129802 | AIS Safety Related Broadcast Message   |          | *       |
| 129809 | AIS Class B "CS" Static Report, Part A |          | *       |
| 129810 | AIS Class B                            |          | *       |
| 130306 | Wind Data                              | *        | *       |
| 130310 | Environmental Parameters               | *        | *       |
| 130311 | Environmental Parameters               |          | *       |
| 130576 | Small Craft Status                     |          | *       |
| 130577 | Direction Data                         | *        | *       |
| 130578 | Vessel Speed Components                |          | *       |

Raymarine® provides field programmability of the Device and System Instances within PGN 60928 which can be commanded via use of PGN 126208 as required by the latest **NMEA 2000** standard.

### Engine & Fuel PGN - Data Content

#### 127488

- Engine Instance
- Eng. Speed
- Eng. Boost pressure
- Eng. Tilt / Trim

#### 127489

- Engine Instance
- Eng. Oil pressure
- Eng. Oil temp
- Engine temp
- Alternator Potential
- Fuel rate
- Total Eng. Hours
- Engine coolant pressure
- Fuel pressure
- Percent Eng. Torque
- Percent Eng. Load

#### 127496

- Time to Empty
- Distance to Empty
- Estimated fuel remaining
- Trip run time

#### 127497

- Engine instance
- Trip fuel used
- Fuel rate average
- Fuel rate economy
- Instantaneous fuel economy

#### 127498

- Engine instance
- Rated Engine speed
- VIN
- Software ID

#### 127505

- Fuel Tank Level

| Data type | Data item   | Notes   |
|-----------|---|---|
| Engine    | <ul style="list-style-type: none"> <li>ECO Mode</li> <li>Transmission Oil Temperature</li> <li>Transmission Oil Pressure</li> <li>Fuel Pressure</li> <li>Average Fuel Rate</li> <li>Instantaneous Fuel Economy</li> <li>Engine Fuel Rate</li> <li>Engine Tilt</li> <li>Engine Hours</li> <li>Engine Load</li> <li>Coolant Temperature</li> <li>Coolant Pressure</li> <li>Alternator</li> <li>Oil Pressure</li> <li>Oil Temperature</li> <li>Boost Pressure</li> <li>RPM (Revolutions Per Minute)</li> <li>RPM Engine Hours</li> </ul>   | Data items available for up to 5 engines.   |
| Fuel      | <p>For tanks 1 to 5:</p> <ul style="list-style-type: none"> <li>Fuel Economy</li> <li>Fuel Rate (Total)</li> <li>TTE (Time To Empty)</li> <li>DTE (Distance To Empty)</li> <li>Est. Fuel Level</li> <li>Season Fuel</li> <li>Total Trip Fuel</li> <li>Trip Fuel</li> <li>Est. Fuel</li> <li>Fuel Level</li> </ul> <p>For <b>All tanks</b>:</p> <ul style="list-style-type: none"> <li>Engine economy total</li> <li>Fuel flow total</li> <li>Time to empty</li> <li>Distance to empty</li> <li>Fuel used (season)</li> <li>Fuel used (trip)</li> <li>Est. fuel remaining</li> </ul> | Data items available for up to 5 fuel tanks. An 'All tanks' category is also available which combines data from all fuel tanks. |

NMEA2000 (Engine & Fuel) Data Items displayed on MFD (Axiom)

# PGN Requirements for Fuel Manager (MFD & i70s)

## NMEA2000 Engine / Fuel PGN's

### 127488

- Engine Instance
- Eng. Speed
- Eng. Boost pressure
- Eng. Tilt / Trim

### 127489

- Engine Instance
- Eng. Oil pressure
- Eng. Oil temp
- Engine temp
- Alternator Potential
- Fuel rate
- Total Eng. Hours
- Engine coolant pressure
- Fuel pressure
- Percent Eng. Torque
- Percent Eng. Load

### 127496

- Time to Empty
- Distance to Empty
- Estimated fuel remaining
- Trip run time

### 127497

- Engine instance
- Trip fuel used
- Fuel rate average
- Fuel rate economy
- Instantaneous fuel economy

### 127498

- Engine instance
- Rated Engine speed
- VIN
- Software ID

### 127505

- Fuel Tank Level

## Fundamental NMEA2000 Data required:

- **PGN127489 (Must have Fuel Flow Rate)**

## If PGN (127496) received from NMEA2000

- Time to Empty
- Distance to Empty
- Estimated fuel remaining
- Trip run time
- ❖ All Fuel Management data available (No MFD calculation required)
- ❖ ECI-100 may not be required
- ❖ Turn Off Fuel Manager on MFD

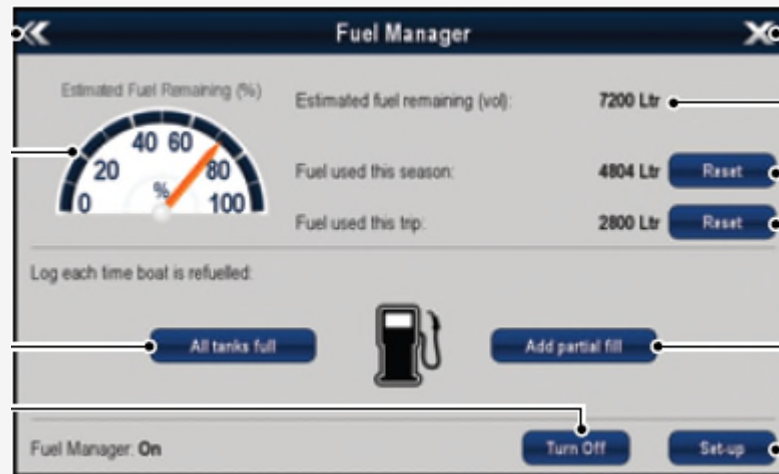

## If PGN (127497) received from NMEA2000

- Engine instance
- Trip fuel used
- Fuel rate average
- Fuel rate economy
- Instantaneous fuel economy
- ❖ All data available for MFD to calculate
- ❖ ECI-100 required to accumulate & store Trip Fuel for multiple engines
- ❖ Set Fuel Manger on MFD to (127497)

## If (127489) only received from NMEA2000

- Fuel Rate – etc.
- ❖ SOG & Fuel Rate must be available
- ❖ ECI-100 Calculates (PGN 127497) & records Accumulated Fuel TRIP used
- ❖ Set Fuel Manager on MFD to (Fuel Flow Rate)

# ECI-100 – Fuel Rate (Trip recording)

## To display Fuel Management Data (TTE, DTE, Economy & Range Ring etc. on MFD:

- Fundamental Data required from NMEA2000:
  - Engine Fuel Flow Rate (127489) & SOG – (ECI will calculate & store Accumulated Fuel Trip)
- If (PGN 127496) received – (Fuel management data)
  - Turn off Fuel Manager on MFD (uses data direct from vessel Fuel system)
- If (PGN 127497) received – (Accumulated (Trip) Fuel Used total)
  - Turn On Full Manager on MFD & Set Fuel Calculations to (127497)
  - ECI-100 used to records & Accumulated Fuel TRIP used for multiple engines
- If (PGN 127489 – Fuel Rate) only received
  - Turn On Full Manager on MFD & Set Fuel Calculations to (Fuel Flow Rate) – MFD must remain on!
  - ECI-100 Calculates (PGN 127497) & records Accumulated Fuel TRIP used

# Example – Dedicated CAN bus for each Engine

- Example Engines:
- CAT, MAN, MTU etc

| Item | Description  |
|------|--|
| 1    | Engine 1 CAN bus                                     |
| 2    | Trailing lead  |
| 3    | Engine specific adaptor cable.                       |
| 4    | ECL-100  |
| 5    | SeaTalk <sup>ng</sup> network power supply (12 V dc) |
| 6    | Engine 2 CAN bus                                     |

# Engine data & Steering Control

- Example - Volvo IPS & Aquamatic Sterndrive (Joystick)
- Requires one ECI-100 & EV-2
- Relevant cable or Y loom

D12971-1

# ECI-100 (DBY) Pilot System

## Single or Multi Engine CAN bus Connections:

- Volvo & Yamaha use (1) ECI-100
- Connection via “Y” loom (earlier Volvo systems)
- or Preferred via the (yellow) Multi link hub\*
- This will allow Pilot Control & Engine Data

# Engine Support

- Compatibility with other J1939 & NMEA2000 Full Engines support will follow after launch

# Engine Connection & Compatibility status

| Engine  | Compatibility Status   | ECI-100 Software        | Data bus                               | Cables (Raymarine / Engine)  | ECI-100 Requirement  | Alarms Supported & Notes.   |
|---|--|-------------------------|--|--|--|---|
| Volvo (engine data)                                       | Yes/released   | v1.01<br>v1.07<br>v1.12 | EVC                                    | Volvo Link cable - E70240<br>Use Y cable for EVC C<br>Volvo Y cable – E70241                           | 1 required connected to multilink hub.<br>Or Y cable into EVC loom                         | Over temperature<br>Low oil pressure<br>Low oil level<br>Low system voltage<br>Low coolant level<br>Water in fuel |
| Volvo IPS / D4 Aquamatic (Joystick steering) (EVC-C to E) | Yes/released (Evolution DBW supported)   | v1.01<br>v1.07<br>v1.12 | EVC (C, D & E)                         | Volvo Link cable – E70240<br>Use Y cable for EVC C<br>Volvo Y cable – E70241                           | 1 required connected to multilink hub.<br>Or Y cable into EVC loom                         | Most Alarms supported but limp home and station etc not supported!  |
| Volvo IPS / IO / Inboard EVC-E3                           | Flybridge Rudd fault!<br>Evo works but needs Reactor Pilot for full Joystick steering! | v1.20                   | EVC-E3                                 | Volvo Link cable (E70240)  | 1 required connected to Multilink hub.<br>Min Volvo 10" display required for Alarm support | All Alarms supported  |
| Yamaha (command link)                                     | Yes/released (Engine data supported)   | v1.12                   | NMEA2000 / J1939                       | Yamaha Link cable - E70242   | 1 required to multilink hub  | All standard J1939 Alarms supported<br>Proprietary not!   |
| Yamaha (command link plus)                                | Yes/released (Engine data supported)   | v1.12                   | NMEA2000                               | Yamaha Link cable – E70242   | 1 required to multilink hub  |   |
| Yamaha (helm master)                                      | Yes/released (Evolution DBW)   | v1.12                   | NMEA2000                               | Yamaha Link cable – E70242   | 1 required to multilink hub  |   |
| Yanmar (engine data)                                      | Yes/released<br>Support for Proprietary Alarms required!                               | v1.20                   | NMEA2000                               | DeviceNet (m to f) (E70260)  | 1 required into DeviceNet NMEA2000 network only  | All standard J1939 Alarms supported<br>Proprietary not!   |
| Yanmar (Pilot control – JC10)                             | Functions ok.<br>But not supported because delay in entering Auto!                     | v1.12                   | J1939<br>NMEA2000 via Yanmar Interface | DeviceNet (m to f) (E70260)<br>Yanmar Pilot cable & key  | Not required   |   |
| Honda   | Yes/released   | v1.12                   | NMEA2000                               | DeviceNet(m) to STNG (E06046)<br>Honda cable (06653-ZZ3-760HE)   | 1 required for each engine unless linked on N2K<br>ECO mode not supported via ECI (V1.12)  | All NMEA2000 Alarms supported   |
| Caterpillar   | Released Aug 2015  | v1.20                   | J1939                                  | Y cable (E70305) (DeviceNet to 12way Deutsch Y cable)  | 1 for each engine  | All standard NMEA2000 & J1939 Alarms supported  |
| Nanni   | Under Test   | v1.20                   | J1939                                  | New power/data cable   | 1 for each engine  |   |
| Evinrude Suzuki   | NMEA2000 Standard Data & Alarms supported but not tested!                              | v1.20<br>v1.20          | NMEA2000?<br>NMEA2000                  | Deutsch to DeviceNet?<br>DeviceNet(m) to STNG (E06046)<br>Suzuki cable (990CO88136000) (990CO88147000) | ?<br>ECI-100 not necessary!<br>1 for each engine unless linked on NMEA2000                 | All standard NMEA2000 Alarms supported.   |

# Volvo Engine Compatibility

The ECI-100 is compatible with the following Volvo Penta EVC systems:

- ✓ EVC-C
- ✓ EVC-D
- ✓ EVC-E

## Engine data and Autopilot steering interface

- ✓ D3 Aquamatic
- ✓ D4 Aquamatic
- ✓ D6 Aquamatic
- ✓ V6 Aquamatic
- ✓ V8 Aquamatic
- ✓ IPS350
- ✓ IPS400
- ✓ IPS450

- ✓ IPS500
- ✓ IPS550G
- ✓ IPS600
- ✓ IPS800
- ✓ IPS900
- ✓ IPS1050
- ✓ IPS1200

## Engine data only (diesel engines which are EVC-equipped as standard)

- ✓ D3
- ✓ D4
- ✓ D6
- ✓ D9

- ✓ D11
- ✓ D12
- ✓ D13

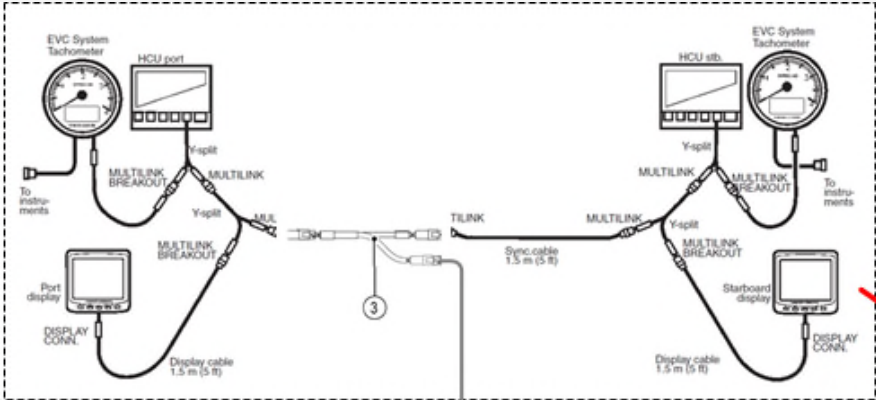

## Engine data only (only if the optional EVC system is specified)

- ✓ V6 Gasoline Stern Drive
- ✓ V8 Gasoline Stern Drive
- ✓ D1 Sail Drive

- ✓ D2 Sail Drive
- ✓ D3 Sail Drive
- ✓ D4-180 Sail Drive

# Volvo EVC "C" – D4,6,9,12,16 Engine - Connections

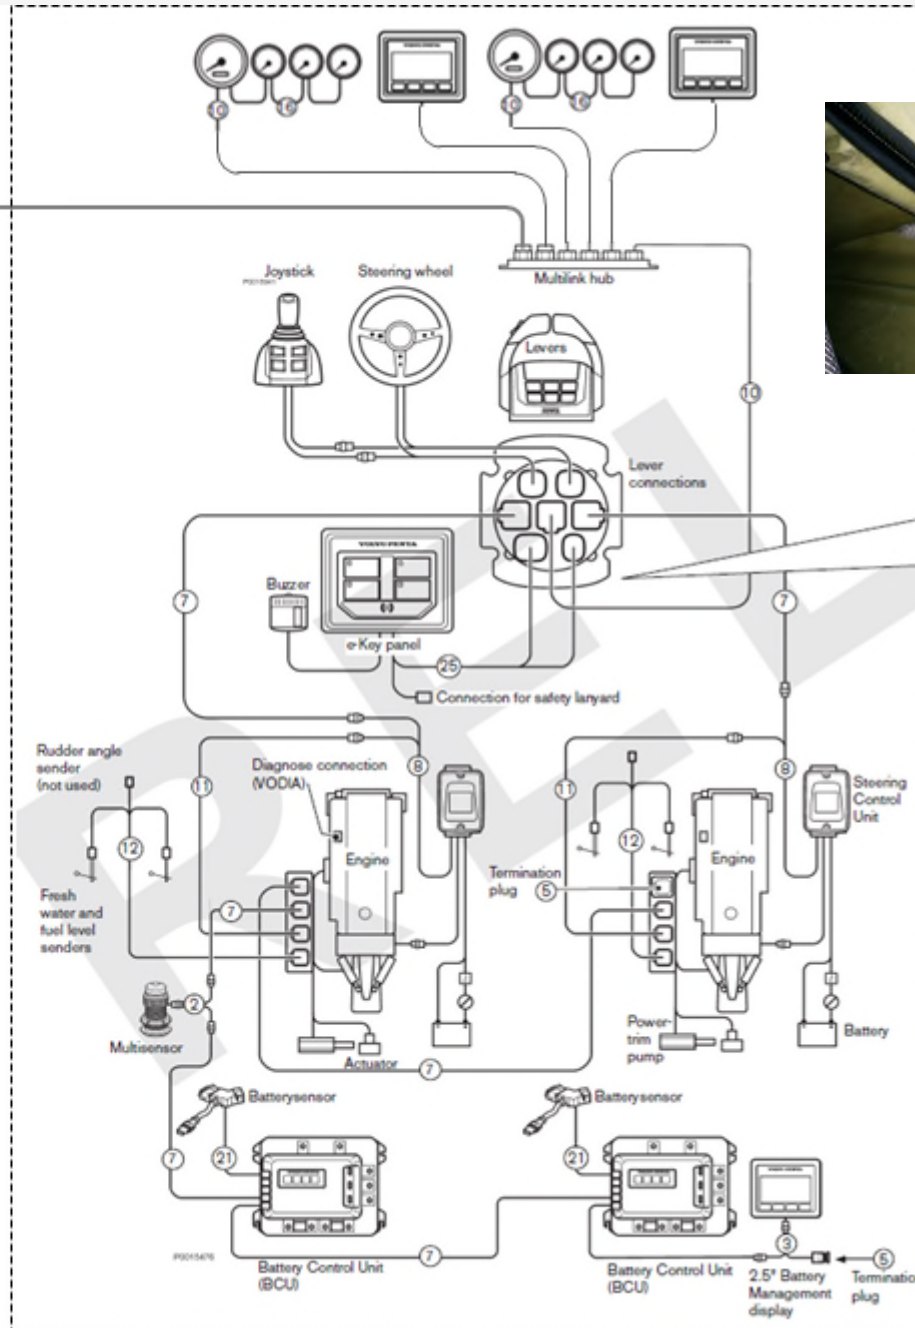

- 1 – Multifunction Display
- 2 – Volvo EVC Link cable (E70240)
- 3 – Volvo Engine Y Loom (E70241)
- 4 – ECI-100 Engine Interface (E70227)
- 5 – Seataik NG Terminated system
- 6 – EV-2 Pilot Course Computer unit
- 7 – Autopilot Controller
- 8 – i70 Instrument

# Volvo EVC "D & E" IPS, Aquamatic & Inboard D type Engines

# Volvo EVC-E Multilink Hub

## NOTE:

- Check that the ECI-100 is connected to the correct part of the EVC system.
- Generally the correct connection will have Volvo cables already connected marked "Multilink" with yellow sleeve.
- Generally the ECI-100 would not be connected directly to an engine or in the engine room!

# Yamaha Engine support – From software version (v1.12)

ECI-100 is compatible with the following Yamaha Electronic Control systems

- Command-Link – (Engine data) – **New MFD Engine data page (LH3.19)**
- Command-Link Plus – (Engine data)
- Helm Master – (Evolution Pilot DBW Control)

ECI-100 is compatible with the following Yamaha Engines.

- Engine Data only - (when Command-Link or Command-Link Plus electronic engine control system is fitted)
- Evolution DBY Control – (when a Helm Master electronic steering system is fitted)

- ✓ F50
- ✓ F60
- ✓ F75
- ✓ F115
- ✓ F150
- ✓ F200
- ✓ F225
- ✓ LF250
- ✓ F350
- ✓ LZ150
- ✓ Z175
- ✓ LZ200
- ✓ Z250
- ✓ VZ250
- ✓ LZ300

- ✓ T50
- ✓ T60
- ✓ F90
- ✓ LF115
- ✓ LF150
- ✓ LF200
- ✓ F250
- ✓ F300
- ✓ Z150
- ✓ VZ150
- ✓ Z200
- ✓ VZ225
- ✓ LZ250
- ✓ Z300
- ✓ VZ300

**Important: Not all engines have a Command-Link, Command-Link Plus, or Helm-Master system fitted as standard. Please check with your local engine dealer to ensure that you have a compatible system fitted to your boat!**

# Yamaha Engine Connections via ECI-100

## Interface requirements:

- ECI-100 (v1.07 software) - (Only one required for single or multiple outboard engines) - (E70227)
- Raymarine Yamaha Link cable - (E70242)

### Yamaha Engine Data only

- 1 – Multifunction Display
- 2 – ECI-100 Engine Interface (E70227)
- 3 – Seataalk NG Power supply (12v)
- 4 – Raymarine Yamaha Link cable (E70242)  
(Connect to Engine Hub spare DEVICE socket)
- 5 – Yamaha outboard engine system bus
- 6 – Seataalk NG Spur cable (part of terminated STNG Backbone)
- 7 – Yamaha Command Link or Command Link plus Hub.

(7) Yamaha Command Link Hub

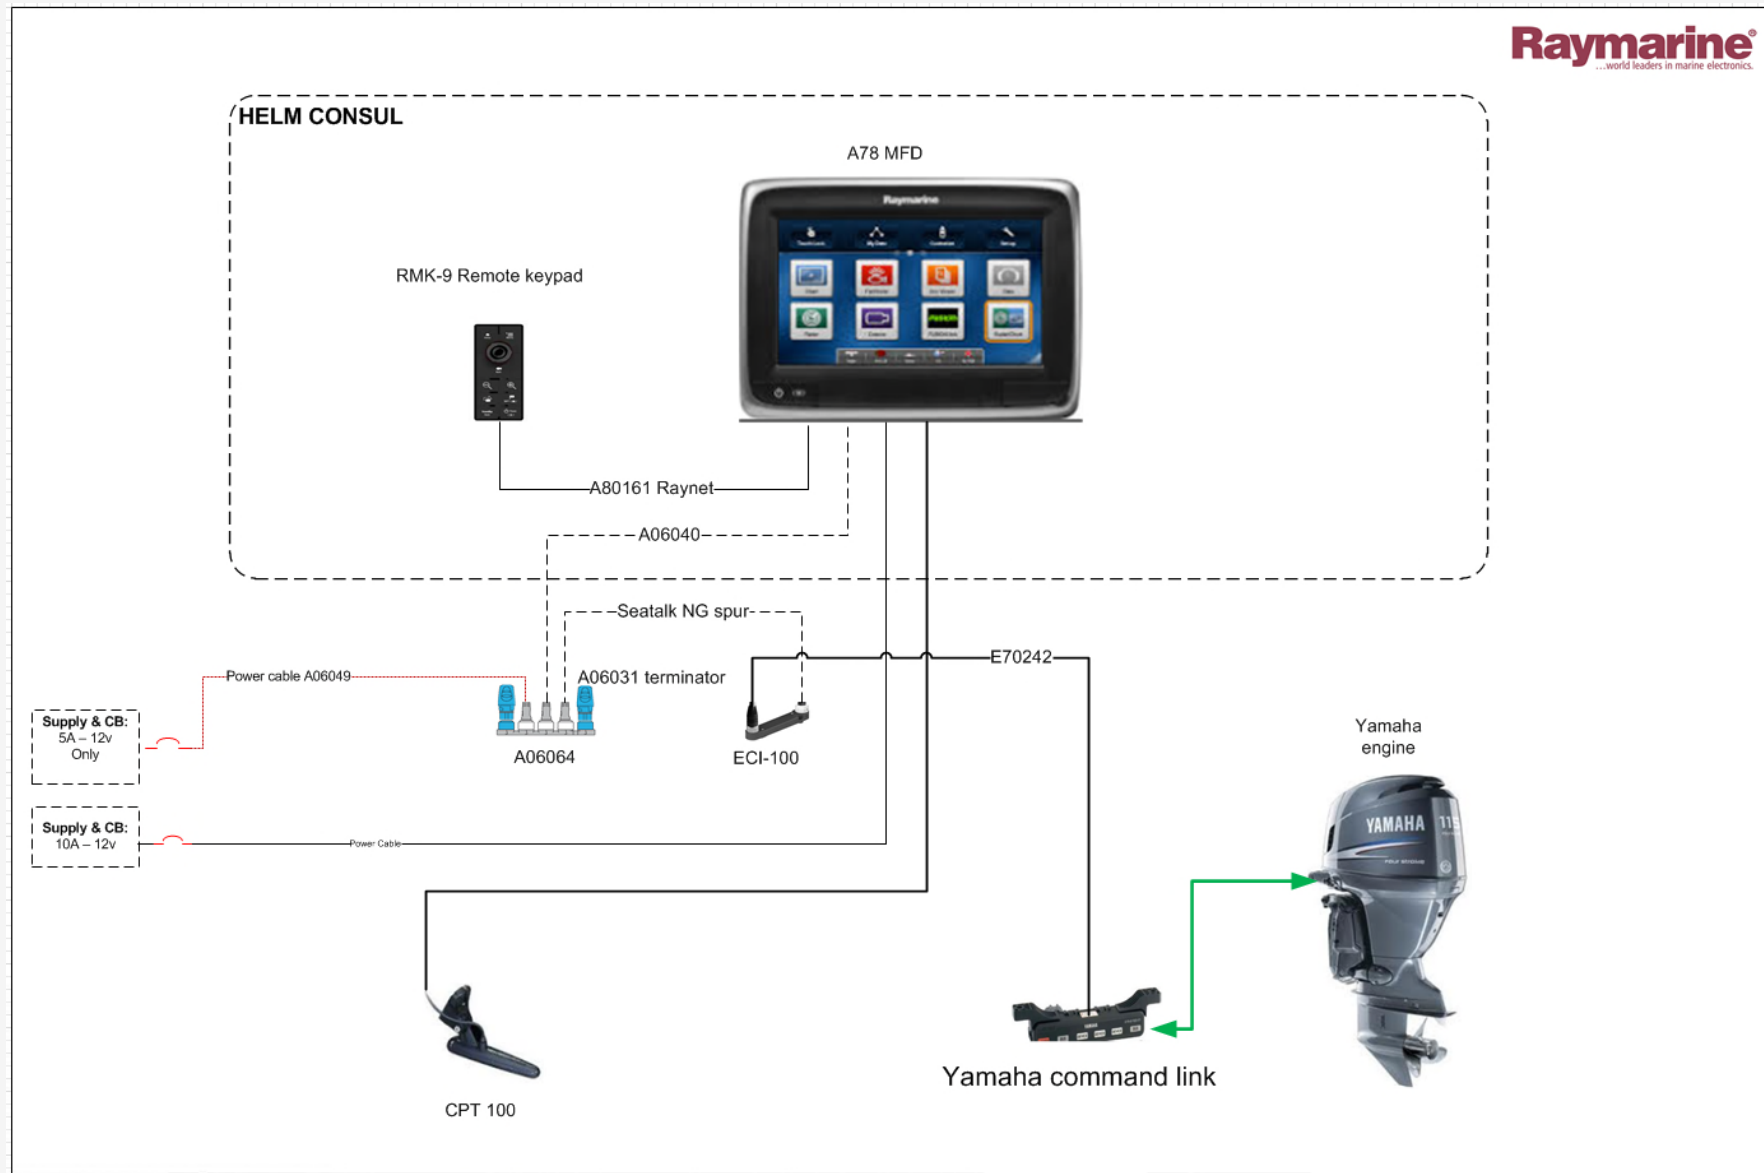

### Yamaha Engine Data & Evolution Pilot Control

- 1 – Seataalk NG Spur cable (part of terminated STNG Backbone)
- 2 – ECI-100 Engine Interface (E70227)
- 3 – Seataalk NG Power supply
- 4 – EV-2 Evolution Autopilot
- 5 – Raymarine Yamaha Link cable (E70242)  
(Connect to Engine Hub spare DEVICE socket)
- 6 – Yamaha outboard engine system bus
- 7 – Yamaha Command Link or Command Link plus Hub.

  - Configure Yamaha Dashboard page in HomeScreen
- Settings and Boat Details
  - Select Yamaha as engine manufacturer
  - Configure Yamaha display – Twin, Triple, Quad...
  - Select number of Batteries
  - Select number of Tanks

# Yamaha – Command Link / Command Link Plus

## Compatible Engines:

- Yamaha F200/300 Inline outboards
- Yamaha 4.2l V6 Offshore
- F350 V8
- F425 V8 5.6l Twin, Triple & Quad.

For dedicated Yamaha Engine page on Axiom

## Yamaha Command Link / Link Pro:

- Requires Yamaha (6YG-8A2D-00-00) Gateway **A**
- STNG to DeviceNet (F) cables

Optional:

- CL7 Display for Set Point & Joystick steering **B**  
Not required with Axiom Yamaha Page!

# Yamaha – Command Link / Plus - Helm Master

## Compatible Engines:

- Yamaha F200/300 Inline outboards
- Yamaha 4.2l V6 Offshore
- F350 V8
- F425 V8 5.6l Twin, Triple & Quad.

## For Dedicated Yamaha Page on Axiom

## Yamaha Helm Master Steering:

- Requires Yamaha (6YG-8A2D-00-00) Gateway **A**
- STNG to DeviceNet (F) cables
- CL7 Display for Set Point & Joystick steering. **B**

## Autopilot:

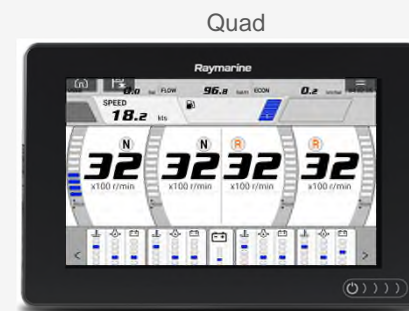

- EV2, ECI-100
- p70Rs (optional)

# Yamaha Command Link Pro

- Available Q1 2019 with LH3 v3.9
- Dedicated Yamaha Page in Home Page selection.
- Supports 1 to Quad Engine installs
- Eliminates need to fit Yamaha CL7 7" display
  - Requires NMEA2000 Gateway (\$325)
    - 6YG-8A2D00
  - IMPORTANT: Set point functions (Fish Point, Drift Point and Stay Point) require CL7.

# Yamaha Command Link / Command Link Pro

- Compatibility: Yamaha In-Line F200 outboards and 4.2L V6 Offshore, all V8 F350 models and new F425 (V8 5.6L) in twin, triple or quad configurations.
- Eliminates need to fit Yamaha CL7 7" display
  - Requires NMEA2000 Gateway (\$325)
    - P/N: 6YG-8A2D-00-00 **A**
  - IMPORTANT: Helm Master functions (Fish Point, Drift Point and Stay Point) and joystick functionality require CL7 **B**

# Yanmar Engine support

Yanmar Electronic Engine systems for the display of Engine Data on Raymarine MFD and Instruments:

ECI-100 is compatible with the following

Also compatible with Yanmar DBW steering systems - (ECI-100) not required!

(BY Engines are NMEA2000 – JH Engines are J1939)

## Engine data only

|             |             |

  - Low Oil Level
  - Low System Voltage
  - Low Coolant Level
  - Water In Fuel

# Yanmar Engine (Data) Connections via ECI-100

## Interface requirements:

- Yanmar DeviceNet bus not isolated so ECI-100 (v1.20) required.
- Only one ECI-100 required for single or multiple outboard engines) - (E70227)
- An NMEA2000 DeviceNet cable and T-Piece connector - (Not supplied by Raymarine)

## Connection Requirements:

- Extend the Yanmar NMEA2000 engine bus by simply connecting into the engine bus an additional NMEA2000 T-piece. (as above).
- Connect the NMEA2000 DeviceNet cable (4) (Fem to Male - E70260) to the spare T-Piece drop connector.
- Connect the other end of the NMEA2000 DeviceNet cable (4) to the ECI-100 (2) DeviceNet socket.
- Connect the ECI-100 (2) Seatalk NG socket via a Spur cable to the Raymarine Seatalk NG terminated Backbone (6).

## Yanmar DBW Pilot Connections:

- ECI-100 not required for Pilot - Directly connects to Yanmar Pilot interface
- Yanmar Autopilot cable required –(164000-23100).
- Yanmar ID Key for Autopilot – (164000-16100).
- 20 second delay before Pilot can be engaged into Auto!

## Software Updates:

- Software (v1.20) August 2016 – Enhanced Alarm data bridging. Oil Pressure bridged & High Fuel Temperature Alarm for Yanmar Engines
- Future Software (v1.21) – High Fuel Pressure Alarm supported for Yanmar.

may require US Government authorization for export purposes. Diversion contrary to US law is prohibited.

# Yanmar Engine – Interface box & Jumper Fuses

Jumper Fuse for Port & Starboard engines  
(Single engine labelled (P) Port)

Yanmar (Seastar) Engine Interface box

Note:

Box labelled (P) for Port engine!

described herein is prohibited.

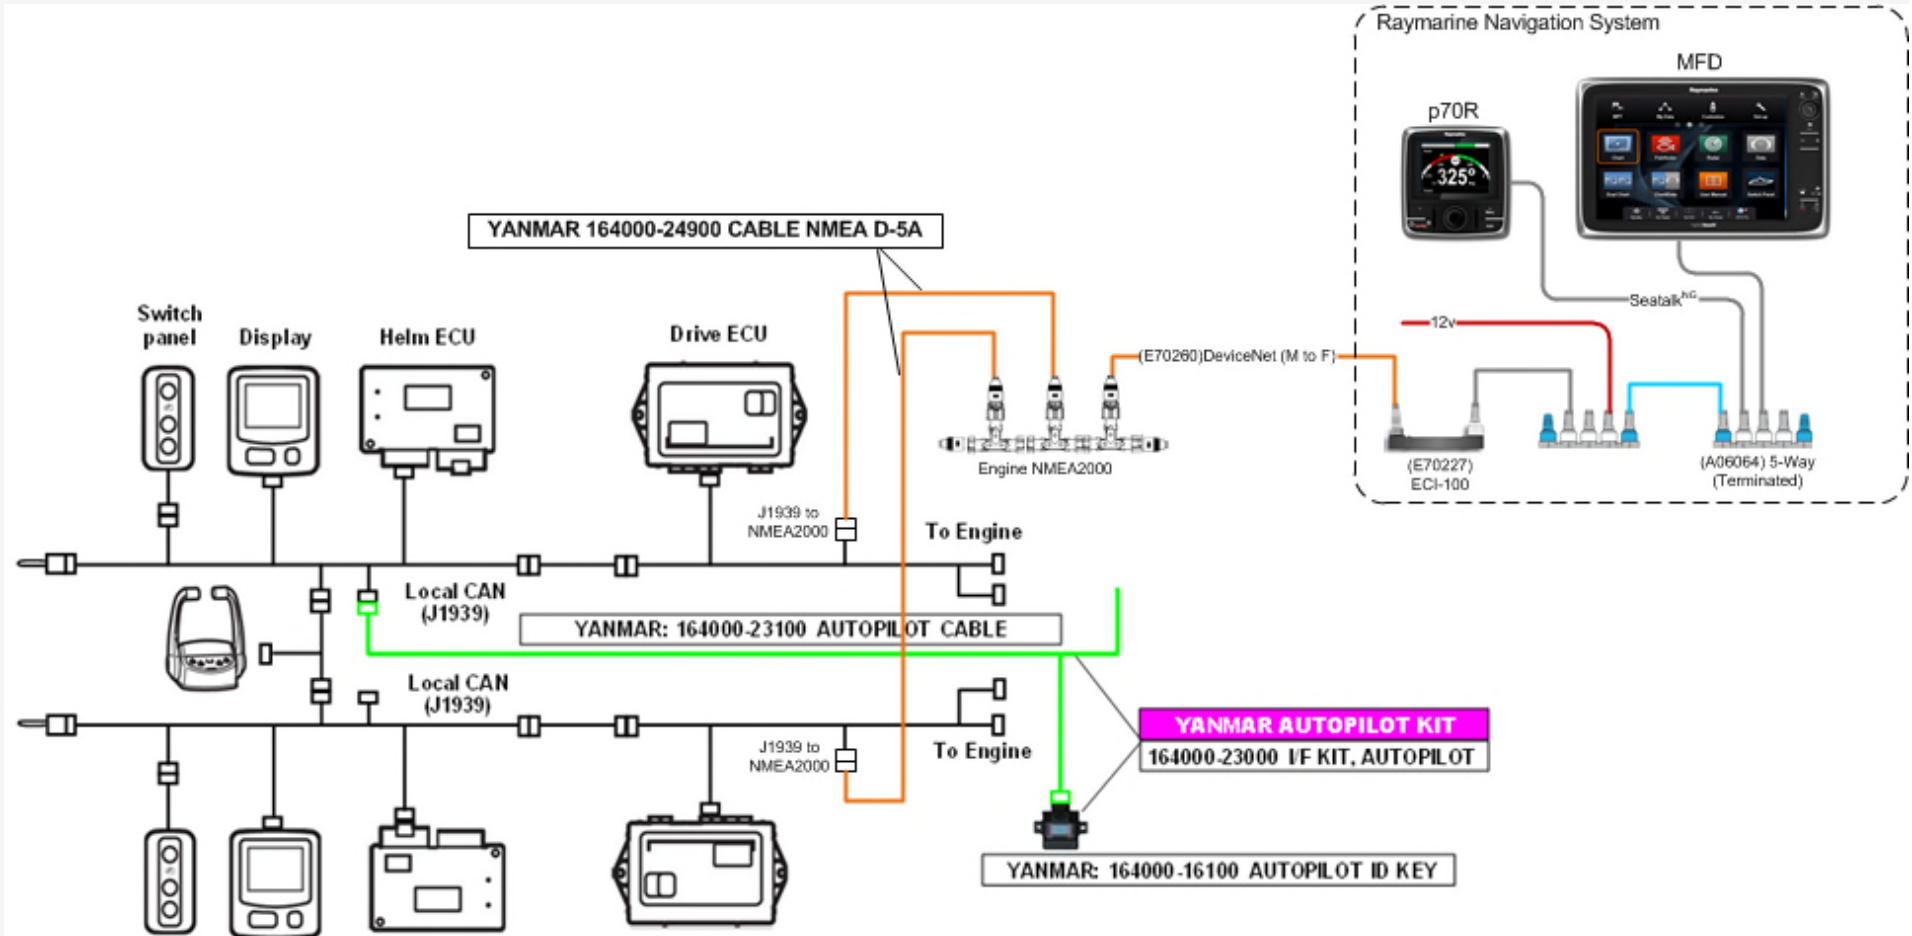

# Example Navigation system – including Yanmar Engine data

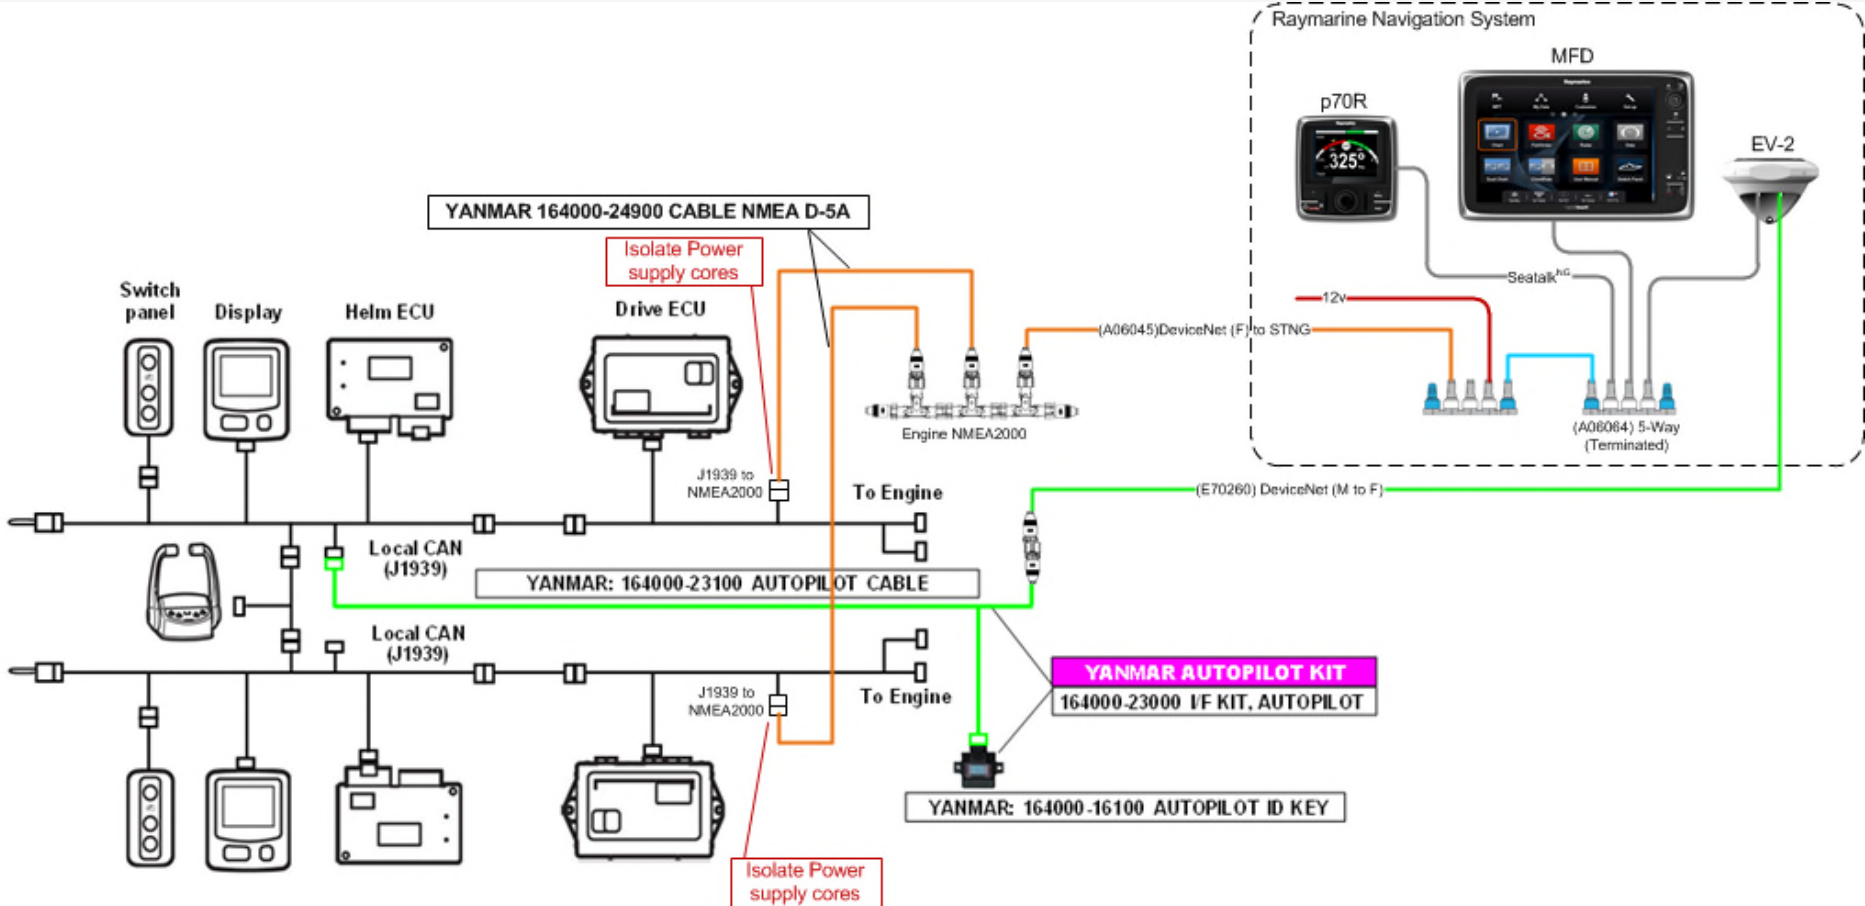

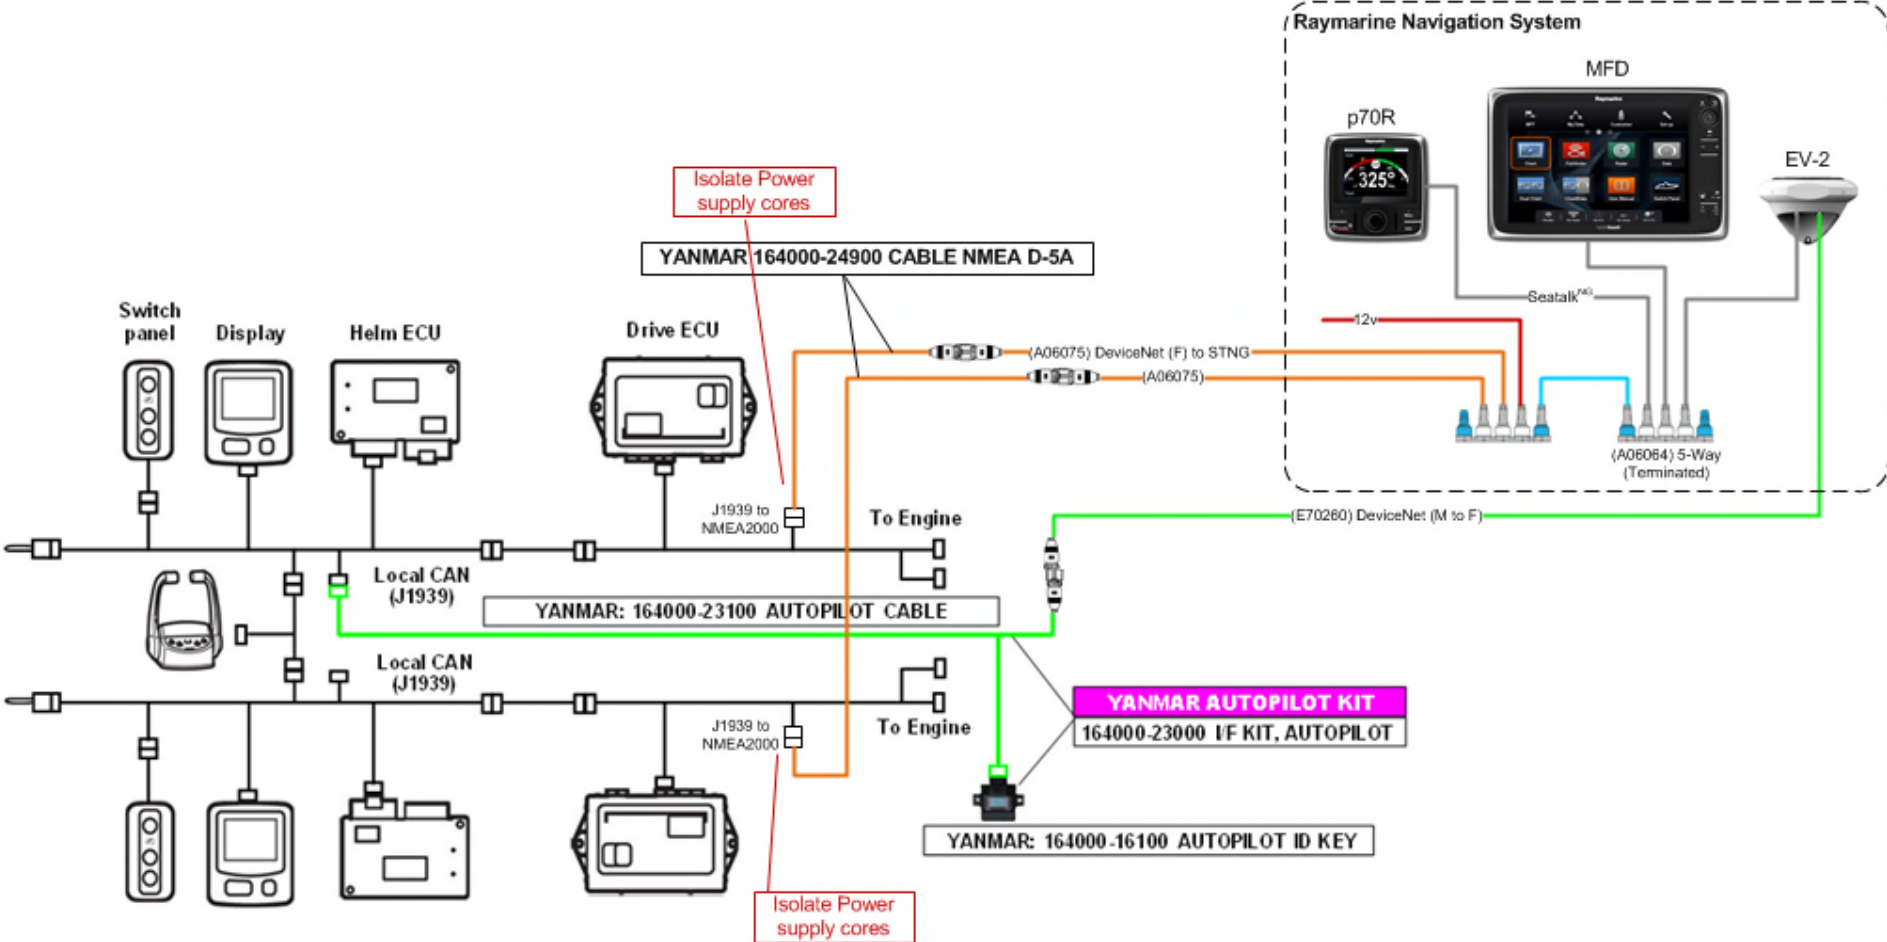

# Twin Yanmar 8LV Stern Drive – Data only option

# Twin Yanmar 8LV Stern Drive – Data & Pilot option 1

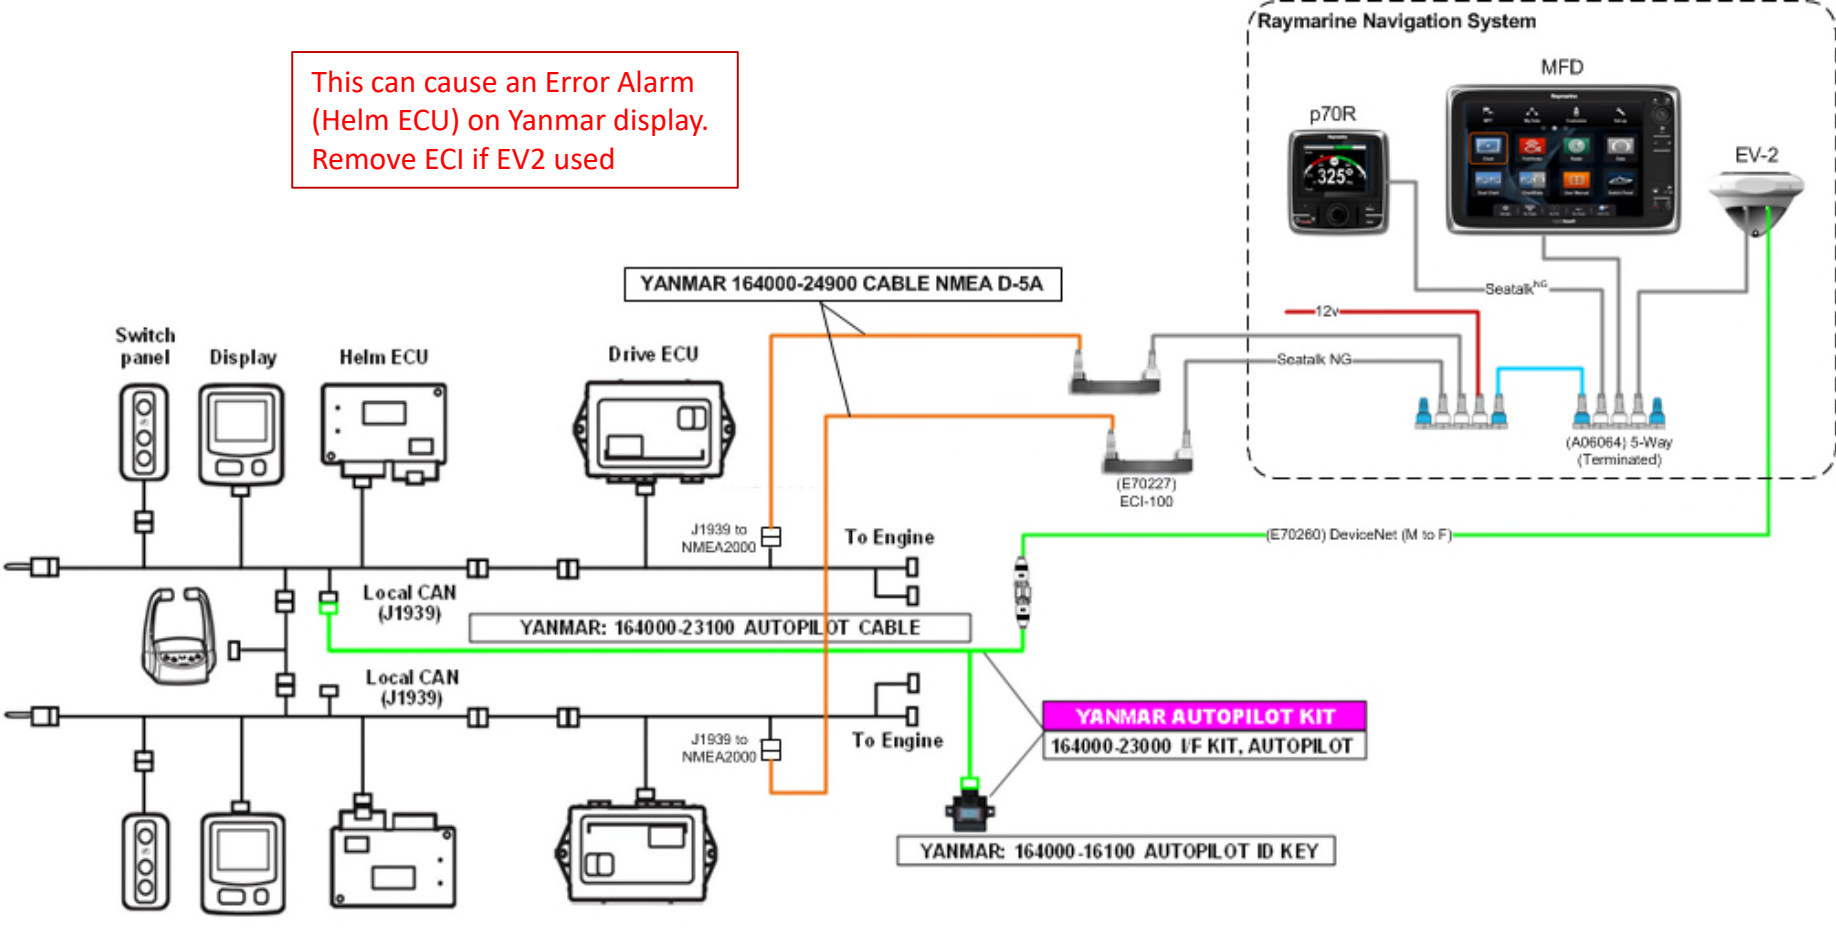

# Twin Yanmar 8LV Stern Drive – Data & Pilot option 2

# Twin Yanmar 8LV Stern Drive – Data & Pilot option 3

This can cause an Error Alarm (Helm ECU) on Yanmar display.  
Remove ECI if EV2 used

# Honda Engine Data PGN's supported

**Important Note – Listed data/PGNs may not necessarily be transmitted from the connected engine/s**

# Honda Engines – Connected to a single engine

- For a single engine one ECI-100 is required.
- A DeviceNet (F) to Honda engine loom cable is required. (Honda part – PN 06653 – ZZ3-760HE). Connect under engine hood.
- Connect into the Terminated Seataalk NG backbone. As diagram
- Engine Instancing not required but Engine must be running at 200+ RPM to obtain engine data

## Honda ECO Mode:

ECI-100 (v1.12) – Currently does not support Honda ECO mode on MFD.

(If Econ mode required - Connection must be made directly via NMEA2000 without ECI-100).

i70/i70s Instruments support Honda ECO mode from software (v3.07).

Proprietary - Company Confidential ©2019 FLIR Systems Inc. Information and equipment may require US Government authorization for export purposes. Diversion contrary to

# Honda Engines – Connected to multiple engines

- For multiple engines with separate NMEA2000 backbones, one ECI-100 is required for each engine.
- A DeviceNet (F) to Honda engine loom cable is required for each engine (Honda part – PN 06653 – ZZ3-760HE)
- Connect each ECI-100 into the single Terminated Seatalk NG backbone. As diagram.
- We do not recommend changing the individual engine networks to a single NMEA2000 network!
- Engine Instancing will need to be undertaken. This can be achieved by using the Engine Identity Set up on an a, c, e or gS Series MFD. – You can not use the ECI-100 alone to configure these engines.
- Engine must be running at 200+ RPM to Instance and obtain engine data.

# Honda Engines – multiple engines on same backbone

Pic 2

## Two or more Engines on the SAME NMEA2000 Backbone:

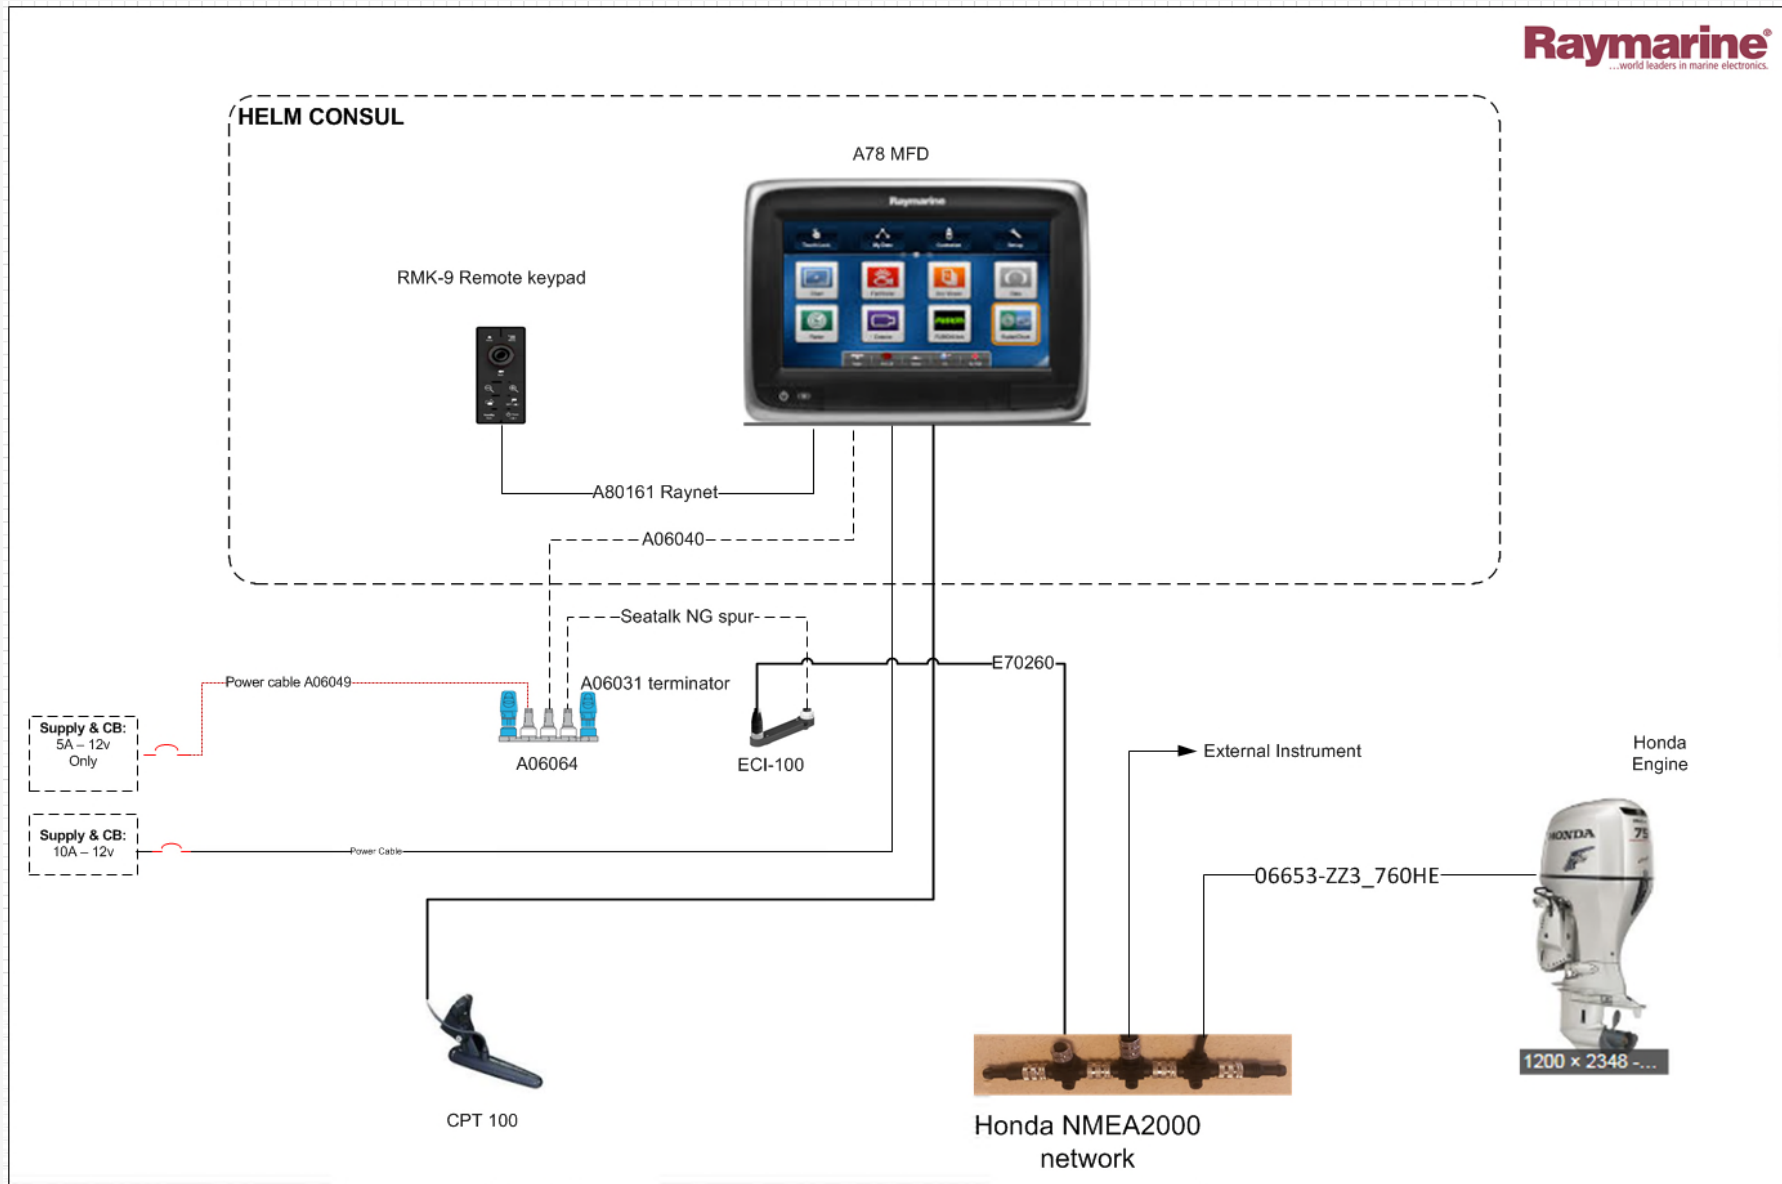

If you have two or more engines and they are all connected on one single Honda NMEA2000 backbone, then you can use a single ECI-100 to link between ST<sup>ng</sup> and the Honda NMEA2000 Backbone.

- See **Pic 2** for a connection overview

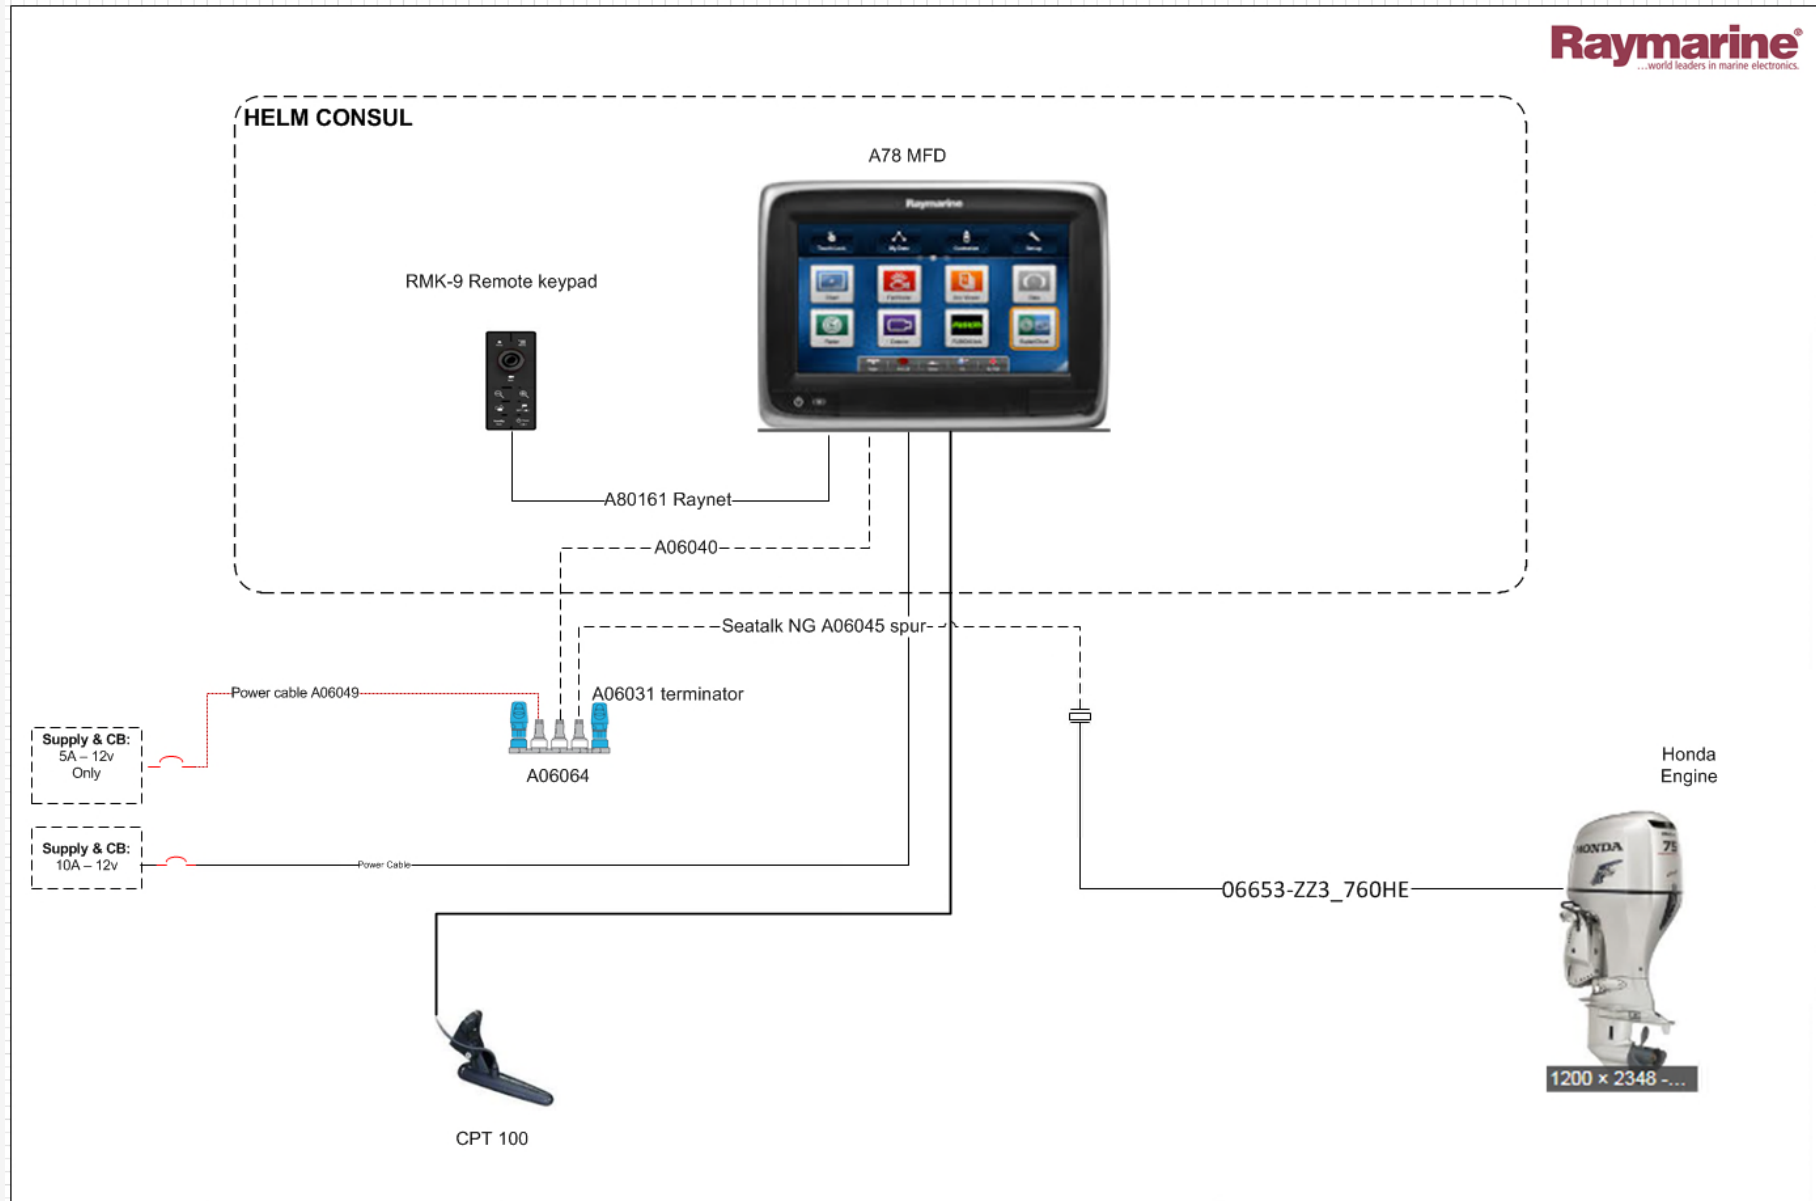

With this installation, you will need to perform the ECI-100 Engine Instancing Sequence:

1. When the ECI-100 is powered on for the first time ever, it is in a “Instancing mode”
2. You need to power the PORT most engine on first, and this gets assigned an instance of 0.
3. Then, moving towards the starboard engine, power each of the other engines on in turn, and each will get assigned an increasing instance number (1, 2, 3 etc...). E.g. Port, then Middle and finally Starboard.
4. The ECI-100 will only accept an engine when it sees the RPM is Greater than 200. So simply turning on an electronic ignition switch is not enough, each engine has to be cranked in turn. Remember, the ECI-100 will not pass ANY engine data until each engine has been cranked. (If you get the instancing wrong, you will need to use an a,c,e,gS Series MFD to re-instance the engines using the wizard)

NOTE! Cable part no can be  
different in different markets.

# Caterpillar Engines -

- J1939 data protocol.
- ECI-100 software (v1.20) update required. (TU620 - Aug 2015)
- CAT Engine Y Link cable – (E70305) required

(An ECI-100 connects between engine gauge and CAT Deutsch cable).

- Requires an ECI-100 & Link cable for each Engine.

# Caterpillar Engine data support

## Compatible CAT Engines:

- All CAT Engine installations that include the engine displays, colour MPD, MPD or mini MPD
  - The colour MPD (Marine Power Display) is compatible with all currently available CAT electronically controlled marine engines from the C7 to the 3500C Series.
  - The MPD display is compatible with CAT 3126B to 3500B Series.
- Only CAT Systems with individual MPD's dedicated for each Engine can be supported.
- Engine systems without a dedicated MPD is not supported
- The CAT Messenger Display is not compatible or supported.

## Compatible CAT Engine MPD's

Color MPD

Marine Power Display (MPD)

Mini MPD

## Not compatible MPD

(CAT Messenger)

Remove Deutsch connector & connect to Y cable and ECI as below.

# Caterpillar Engine data support

- Connect the “Y” cable between the Deutsch 12 way CAT Display socket and the 12 way Deutsch cable connector previously removed.
- Connect the other end of the Link cable to the ECI-100 DeviceNet socket. – (See diagram below)

- 1 – MFD
- 2 – CAT Engine loom
- 3 – CAT Y Cable (E70305)
- 4 – ECI-100 (E70227)
- 5 – Seataalk NG 5-way

- Connect the ECI-100 into a Terminated Seataalk NG backbone with appropriate MFD.
  - Follow the Engine Identification Set-up procedure outlined in the (a,c,e,eS,gS) MFD manual.
- Note:** – You cannot use legacy MFD’s to configure multi engine systems with individual ECI’s.
- Note:** - If the ECI-100 has previously been used on another engine type it will need to be reset or use a new ECI-100. - To reset the ECI a tool is required; contact Raymarine Product Support for further information.

# MTU Engine data support

- MTU Smartline engines
  - J1939 data
  - DeviceNet & MTU “Y” cable required.
  - An ECI-100 is required for each engine
  - MTU engine display (not required on helm)
  - Compatible with all standard J1939 engine Data & Alarms
- MTU BVNG (BlueVision) – **Not Compatible!**
  - MTU system control unit required (SCU)
  - ECI-100 does not support BVNG data request mechanism (software required)
- Additional Interface box / engine required from MTU – Converts to J1939

# MAN Engine data support

## MAN engines

- J1939 data
- Compatible with most standard J1939 Data & Alarms that MAN support
- DeviceNet to DeviceNet cable (E70260) required
- An ECI-100 & cable is required for each engine
- Tee into the J1939 CAN bus.
- MAN CAN bus is only data! (Separately power (12v) to ECI engine side)
- If MAN engine display not used. – (Must have Alarm panel (Boening))
- If Alarm panel used connects ECI-100 between J1939 o/p & 3<sup>rd</sup> party display

- If MAN Tacho engine Control used tee off via CAN port.

# nanni Engines -

- Not Fully Supported – Details to be Confirmed!
- Standard J1939 data supported. – Engine data Proprietary
- Requires an ECI-100 for each Engine.
- ECI-100 software update not required (v1.20)
- New nanni cable required – currently being tested  
(split cable includes power & data)

# Nanni

- Axiom 7 with Custom Nanni Engine Page in Dashboard (Graphics loaded by Nanni)
- ECI-100 & (adaptor cable accessory supplied by Nanni)
- Solution provide by Nanni as an Electronics Kit
- Anticipate shipments in Q2 2019

# Cummins C Command – (Axiom (v3.5.40))

Connects via STNG/NMEA2000 to the Cummins CIB Premier or Pro.

- Replace Vessel View with Axiom MFD for full engine data and alarm support.
- All the benefits of Raymarine's full navigation system.
- Connect via NMEA2000. No external gateway required.
- LH v3.5: Cummins proprietary Alarm Silence PGN
- Eliminates the need for an above deck ED4 display as part of the system

N2K

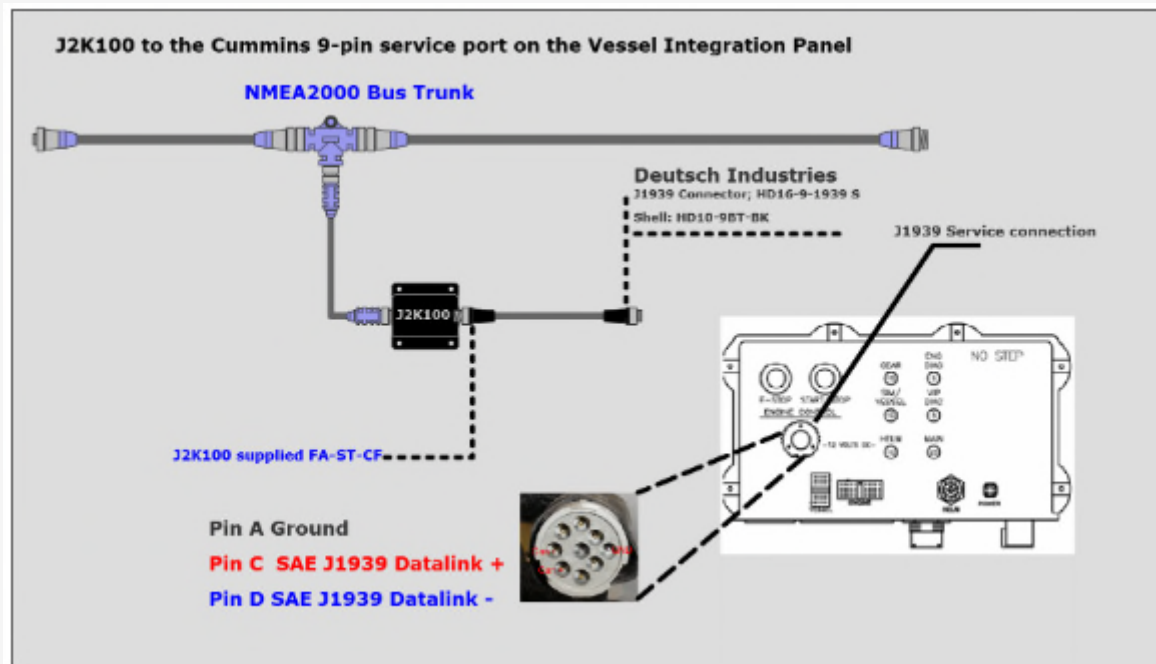

# Cummins QSB Engines

## Cummins Q-Series Engines

The J2K100 can be connected to any of Cummins Engine Models QSB, QSC, QSL, and QSM via the factory provided J1939 connection. The J1939 connector can be located on the engine harness in proximity to the ECU. The two wire connector is labeled J1939.

The Cummins engine J1939 connector may be occupied by a terminating resistor or use by another device. If the connector is in use disconnecting the cable may void warranties and/or cause disruption with your engines operation. Consult a Cummins authorized service center for purchase of a proper mating connector. All Cummins Technicians should refer to Cummins Marine Application Bulletin: 0.15.06-12/08/2009 for details.

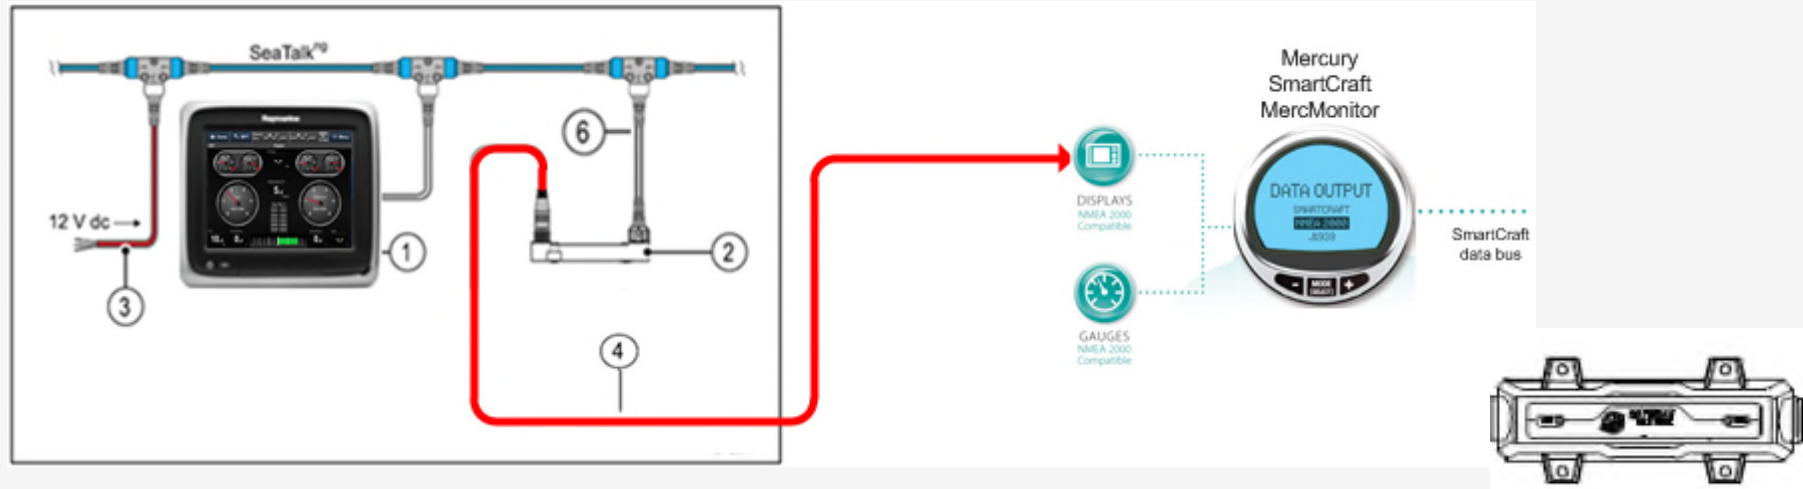

# Mercury & Cummins Engines

- Gateway required from Mercury
- Supports Engine Data only
- Can not control Zeus etc. with Evo Pilot!
- Converts SmartCraft data to NMEA2000
  - MercMonitor / Vessel view
  - Mercury NMEA2000 Gateway (p/n: 8M0065208)

Note: Can cause EVO failure. - (ACU v1.13) required

# Mercury Engine data – VesselView Link Gateway (Simrad)

Part # 8M0110639

The Mercury® VesselView® Link interface module integrates SmartCraft® engine data with NSS evo2, NSO evo2 and GO series displays – providing quick access to RPM, speed, fuel tanks, battery voltage, trim tab data and Mercury Smart Modes, like Eco, Smart Tow®, Troll Control and Cruise Control. VesselView® Link puts all the data you want, where you want it – at your fingertips.

The Mercury® VesselView® Link is also available in a multi engine kit (Part No # 8M0110641).

## Key Features

- ▶ The VesselView® Link interface displays Mercury Smartcraft® engine information on your Simrad GO, NSS evo2 or NSO evo2 display including – RPM, Speed, Fuel Tanks, Battery Voltage and Trim Tab data
- ▶ The VesselView® Link control bar provides quick access to Mercury® Smart Modes – Eco, Smart Tow®, Troll Control and Cruise Control
- ▶ The Quick Access control bar provides an integrated view of engine data without dedicating an entire page to Smartcraft® engine data
- ▶ Fault warnings and maintenance reminders can be viewed on your compatible Simrad display
- ▶ Fully integrate the VesselView® Link view with radar, chartplotter or radar split-screen functionality, and easily adjust panel sizes, as needed
- ▶ The VesselView® Link module features a convenient size for beneath-the-helm installation to help preserve dash space
- ▶ Requires Simrad GO, NSS evo2, NSO evo2 software update and VesselView® Link installation – software scheduled for June/ July 2016 delivery.

Please contact your local Mercury dealer for purchasing information.

# Evinrude E-TEC – (NMEA2000 Integration)

Proprietary - Company Confidential ©2019 FLIR Systems Inc. Information and equipment described herein may require US Government authorization for export purposes. Diversion contrary to US law is prohibited.

# Evinrude

- Replace ICON Touch 7 with Axiom
  - Standard DeviceNet N2K connection
- N2K and Proprietary PGN support ([LH3-7987](#))
  - Modes: Trim Assist, Pwr Assist, Winterize, Hand/Foot, Settings: Trim Sender Cal., Tilt Limit Cal.
  - Fluid Level Instancing

- Target Q3 2019

# Engine data Integration – TOHATSU outboard engine data

40-250 hp  
990C0-88149-000 + 990C0-88136-000

R E06045

# Scania Marine Engines (DI109, DI13, DI16) - untested!

## INSTALLATION MANUAL

Connect

### Safety module (SDU), connection

The illustration shows the safety device unit connections.

### Gateway – overview

|   | Description  |
|---|--|
| 1 | Connection to the ship NMEA 2000 network.  |
| 2 | NMEA Instance rotary control. Set the instance which the gateway transmits to other units. Used if 2 or more gateways are connected to the same NMEA 2000 network. In such a case, make sure that each gateway has a unique instance, e.g. "0" and "1".                |
| 3 | Blue Tx LED, indicates that data is being received from NMEA 2000 every 2.5 seconds.   |
| 4 | Green Rx LED, indicates that data is being sent to J1939.  |
| 5 | J1939 Source rotary control. Set the instance for the NMEA 2000-GPS which the information should be loaded from. If the gateway does not receive any signals from a GPS with the selected instance within 30 seconds, all valid GPS data is transferred automatically. |
| 6 | Connection to harness-to-harness connector C4067 junction box. See <a href="#">C4067</a> .   |

# Victron – Integration with Axiom App (v3.11)

Step 1: Connect the RayNet adaptor cable into display.

Step 2: Connect RJ45 into Victron Venus GX, Color Control GX or Octo GX.

Then go to Apps and select the Victron logo.

### 3. Wiring

The MFD needs to be connected to the GX device using ethernet. It is **not** possible to connect over Wi-Fi. For the ethernet connection, a RayNet adaptor is required.

### 4. Configuration

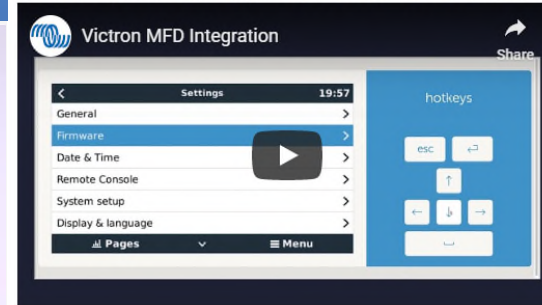

On the Victron GX Device, go to Settings → Services, and there enable MQTT.

Next, go to Settings → System Setup → Scroll to the bottom → Battery measurements. And there set up what batteries you want to see on the MFD; and by what name.

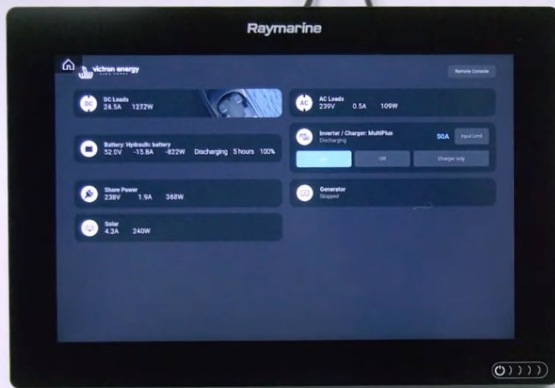

No other settings, such as IP addresses or similar are required, since the Axiom MFDs have an integrated DHCP server.

### 5. Configuring Multiple Battery Measurements

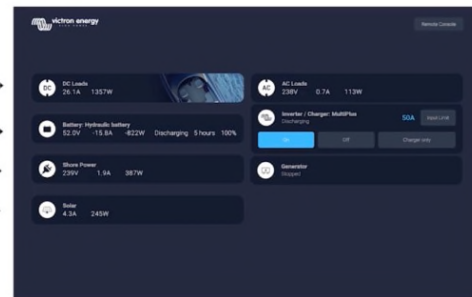

This video explains how to setup multiple battery measurements, and naming them.

[https://www.victronenergy.com/live/venus-os:mfd-raymarine#step\\_by\\_step](https://www.victronenergy.com/live/venus-os:mfd-raymarine#step_by_step)

DC Loads →  
 Battery information →  
 Shore Power →  
 Solar →

← AC Loads  
 ← Inverter Control  
 ← Generator

And... you're done!

All information can now be viewed on one screen.

# Engine Instancing - Summary

## Notes on Engine set-up (Instancing):

- MFD Setup - Instancing only works with an ECI-100 - (value stored in ECI-100)
- For twin engines networked into single ECI – (Use MFD to Instance. (or start engines in sequence (p0-s1-c2))
- For twin independent engines into two independent ECIs – (Use MFD to assign Instance values to ECI per engine)
- MFD Instancing does not work with a Volvo Gateway or any other Engine interface.
- Without ECI-100 Instancing values must be received correctly for each engine in the NMEA2000/J1939 data PGN.

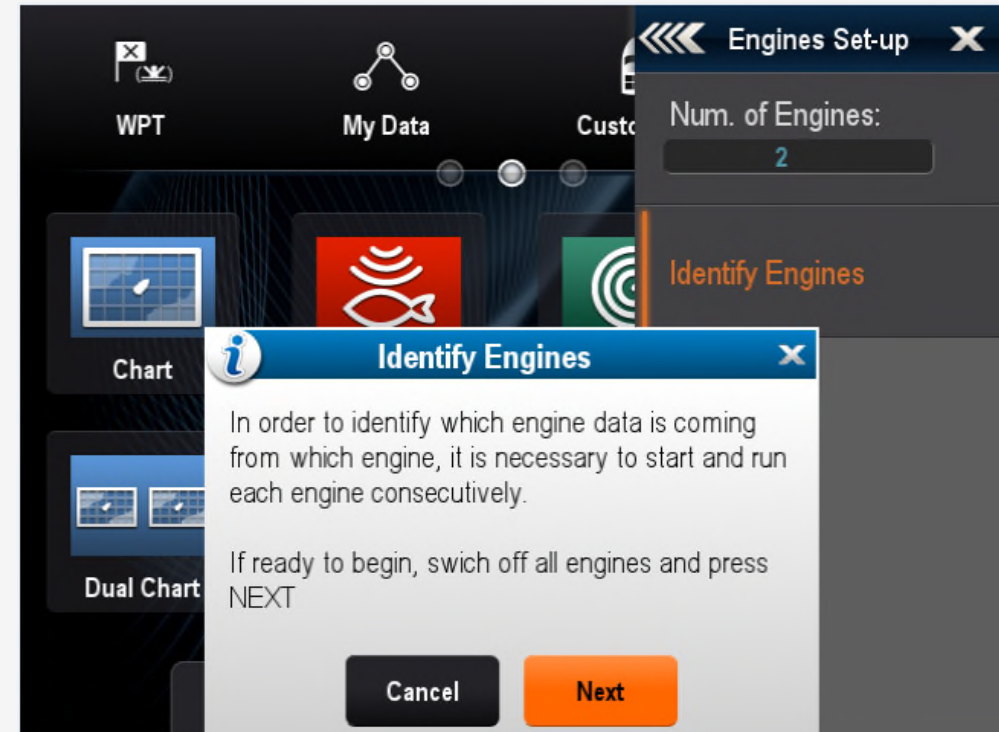

## If Things go wrong:

- Instance values may be out of range. - A good check is to set the MFD number of engines to 5 & view engine page
- Engines displayed reversed. - If engines cranked in wrong sequence – Use MFD to re-instance or reset ECI-100.
- If using 3<sup>rd</sup> party Gateway. Instance values may be set wrong. – Reconfigure Gateway. – Could use ECI-100 inline.

| Engine CAN bus protocol | Number of Engines | Engine CAN bus configuration   | Number of ECI-100 units   | Start up Engines in sequence?  |
|-------------------------|-------------------|--------------------------------|---------------------------|--|
| NMEA2000                | 1                 | Single CAN bus                 | 1                         | Just Crank the one engine  |
| NMEA2000                | 2+                | Single shared CAN bus          | 1                         | Start your engines in sequence, from Port through to Starboard. Or use MFD   |
| NMEA2000                | 2+                | Single CAN bus for each engine | 1 for each engine CAN bus | Use the a,c,e,gS Instancing Wizard, starting each one in sequence. Cannot use legacy MFD to configure this system. |
| J1939                   | 1                 | Single CAN bus                 | 1                         | Just Crank the one engine  |
| J1939                   | 2+                | Single shared CAN bus          | 1                         | Start your engines in sequence, from Port through to Starboard Or use MFD  |
| J1939                   | 2+                | Single CAN bus for each engine | 1 for each engine CAN bus | Use the a,c,e,gS Instancing Wizard, starting each one in sequence. Cannot use legacy MFD to configure this system. |

Note: If engines are cranked in wrong sequence, you cannot reverse the instancing without an a,c,e,gS MFD or a ECI-100 reset.

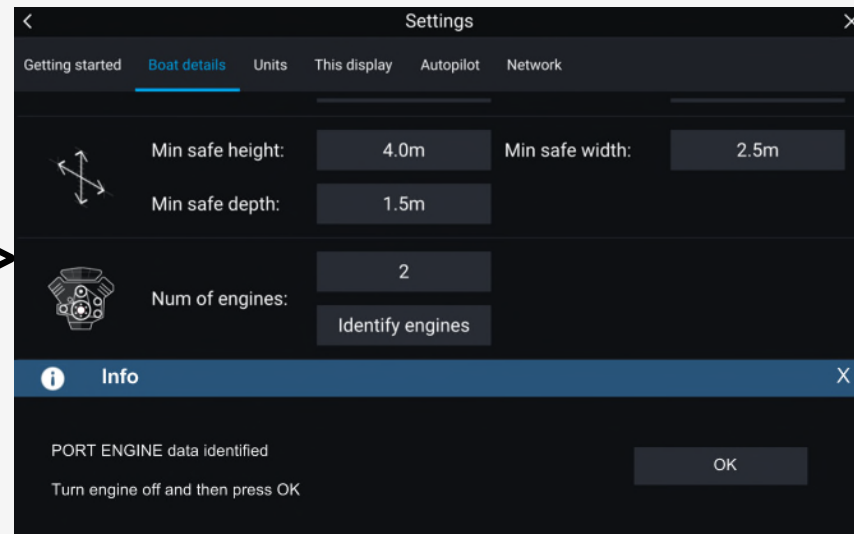

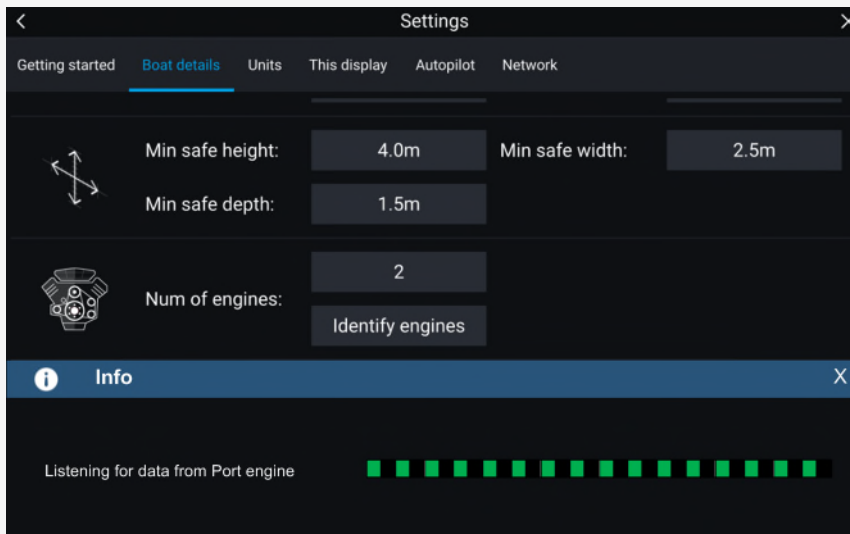

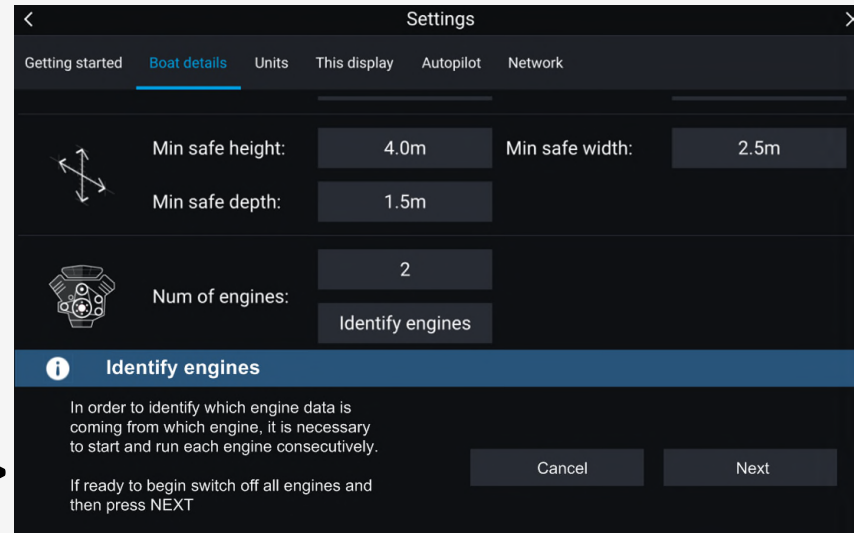

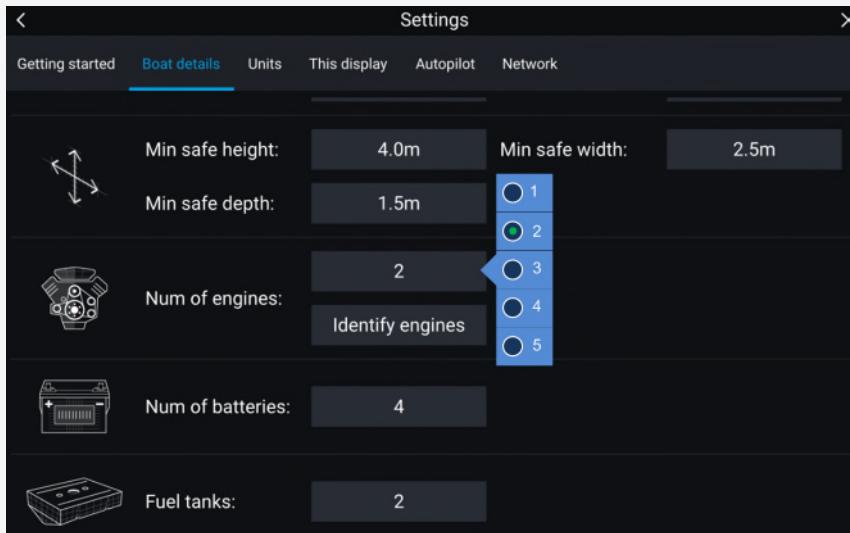

# MFD Engine Identification set-up (LH2)

## Set-up Engine Identification:

- ECI-100 will initially not show any data
- MFD must have v8.0 or later.
- Sequentially turn on each Engine from Port to Starboard
- If Engines in wrong order – Turn Engines off - Run Engine Wizard:
  - Select - Number of Engines (max 5)
  - Select - Identify Engines
  - Follow Instructions – Sequentially turning on Engines from – (Port – Center – Starboard)
- If Engine Identity is wrong on legacy MFD or i70 – ECI-100 will have to be reset (Com Tool)

# Axiom (LH3) Set-up – Engine set-up and Identity

Repeat for second Engine

# ECI-100 – Status LED indication

| LED color | SeaTalk <sup>ng</sup> LED code | Engine CAN bus LED code | State   | User action  |
|-----------|--------------------------------|-------------------------|---|--|
| Red       |                                |                         | Powering up   | None (normal power up takes approximately 6 seconds.)  |
| Green     |                                |                         | Normal operation  | None   |
| Green     |                                |                         | DeviceNet powered on,<br>SeaTalk <sup>ng</sup> powered off                          | Power up SeaTalk <sup>ng</sup> network.  |
| Red       |                                |                         | Network connected but no<br>traffic (no message received<br>in more than 5 seconds. |  |
| Red       |                                |                         | SeaTalk <sup>ng</sup> powered on,<br>DeviceNet Off.                                 |  |
| Red       |                                |                         | General error (Device<br>connected wrong way round)                                 | Swap over SeaTalk <sup>ng</sup> and DeviceNet<br>connections   |
| Red       |                                |                         | Software download in<br>progress (longer than 6<br>seconds.)                        | Wait for download to complete — Multifunction<br>display will indicate when software download<br>is completed. |

# ECI-100 – Software Status

## ECI-100 - Software History

| Application Code | Boot Code | Comment  | Release Date | Tech Note | Start Serial Number |
|------------------|-----------|--|--------------|-----------|---------------------|
| V1.05            | V1.0      | <ul style="list-style-type: none"> <li>• First Production release for ECI-100</li> <li>• Volvo compatibility only. - Engine &amp; Pilot (EVC-C, D, E)</li> </ul>   | Nov 2013     | n/a       | 1130001             |
| V1.12            | V1.0      | <ul style="list-style-type: none"> <li>• Corrects a STNG communication error which can cause the Pilot to drop to Standby and alarm Drive Stopped or No Pilot.</li> <li>• The ECI-100 is now compatible with the following Engine Manufacturers &amp; Steering systems for Engine Data only:                             <ul style="list-style-type: none"> <li>○ Yanmar (Engine Data only)</li> <li>○ Yamaha Command-Link &amp; Command-Link Plus</li> </ul> </li> <li>• The ECI-100 now compatible with the following Engine manufacturers for Evolution Pilot Control:                             <ul style="list-style-type: none"> <li>○ Yamaha (Helm Master)</li> </ul> </li> <li>• Honda Engines using NMEA2000 now supported</li> </ul> | June 2014    | TU572     | 0640001             |
| V1.20            | V1.0      | <ul style="list-style-type: none"> <li>• The ECI-100 is now compatible with all Caterpillar Engine installations that include the engine displays, colour MPD, MPD or mini MPD. (See details below).</li> <li>• Oil pressure implemented for Yanmar Engines.</li> <li>• High Fuel Temperature alarm now supported for Yanmar Engines.</li> <li>• Increased support for J1939 &amp; NMEA2000 alarms for Yanmar &amp; general Engines.</li> </ul>  | August 2015  | TU620     | 0850001             |

### Pending Software Release???

- Corrects loss of Rudder data on flybridge station (EVC E-3)
- Transmits STW & SOG data back to Engine
- Changes for Yanmar Alarms

# ECI-100 – Software Status & Updating

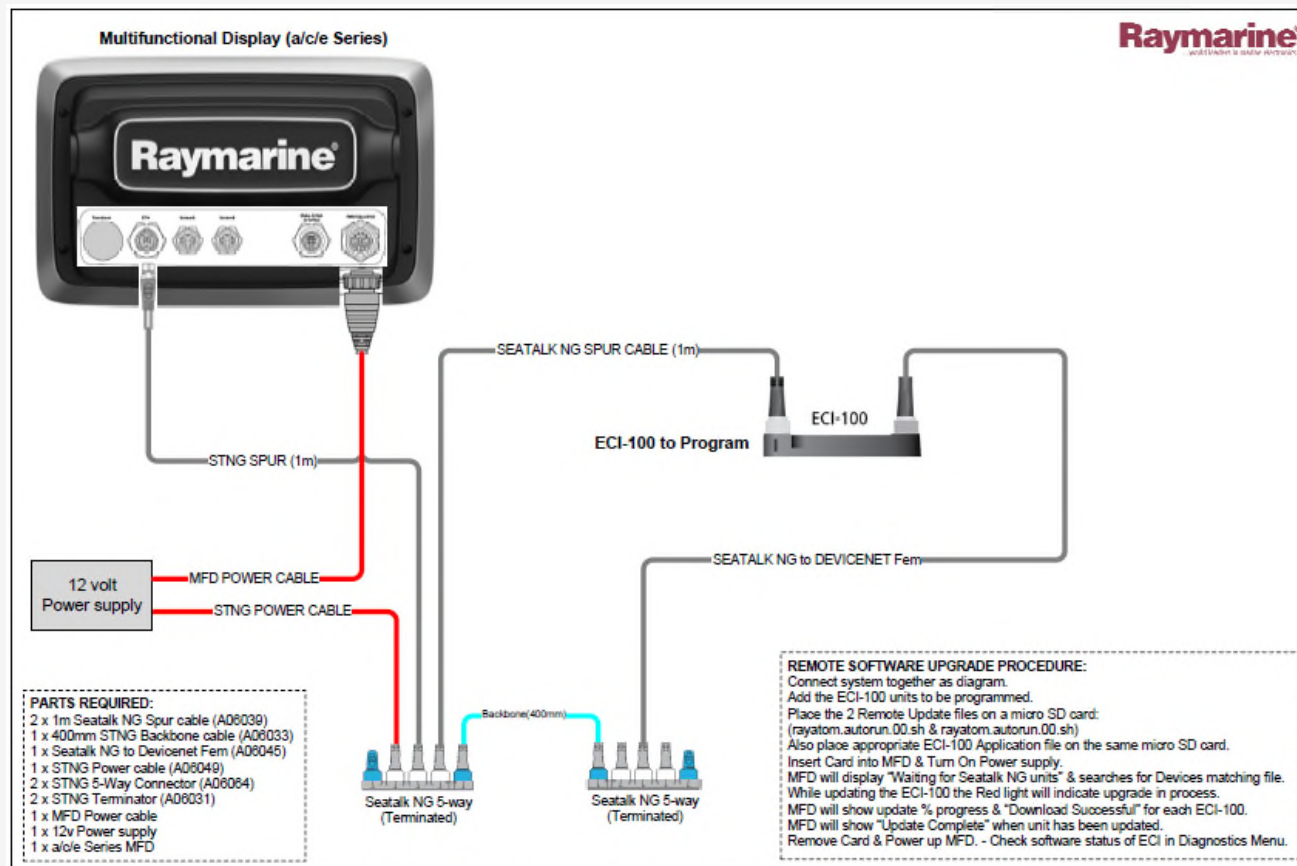

ECI-100 – Production Software level (v1.20) – August 2015

Upgrade Software via MFD Remote (bench device update procedure below)

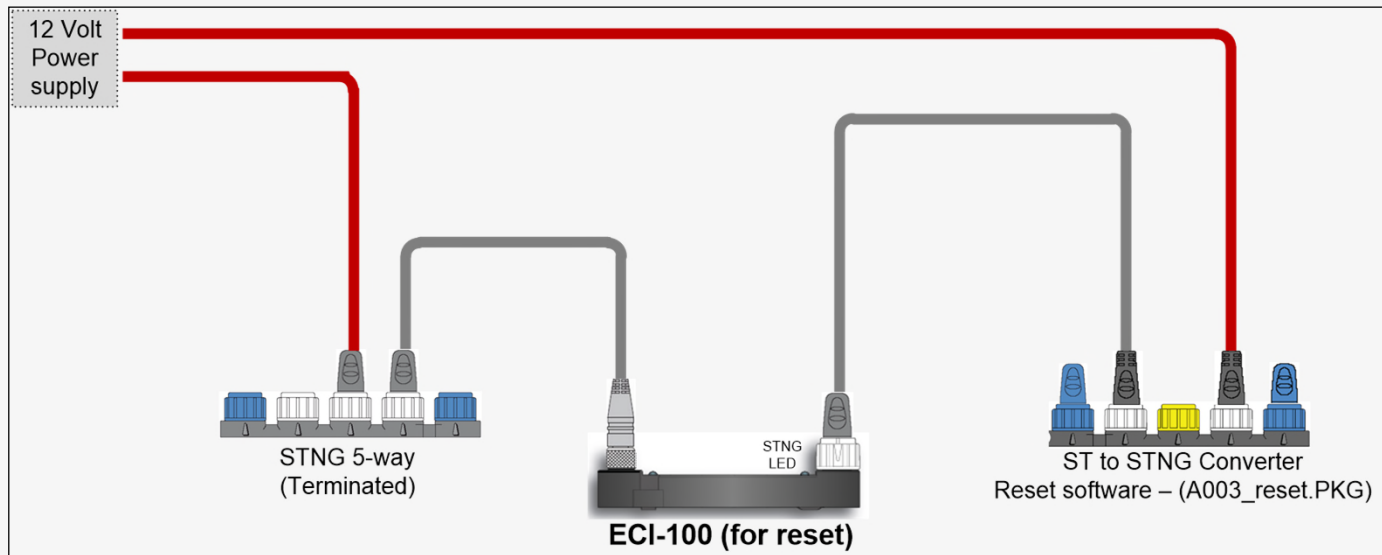

Can be upgraded on-board within a STNG system – make sure both sides of ECI are powered (Engine On)

**IMPORTANT – It is important to reset the ECI-100 if you are swapping between engine types! (e.g. Volvo to Yamaha)**

**Note - Updating the software does not reset the device!**

# ECI-100 Reset Instructions

**IMPORTANT – It is important to reset the ECI-100 if you are swapping between engine types! (e.g. Volvo to Yamaha)**

## Instructions:

1. Program the (STNG to ST Converter) with Reset Software (A003\_reset.PKG) via an MFD.
2. Connect as circuit above.
3. Apply Power. Ensure Converter Flashes Green LED every 0.5 seconds and ECI-100 LED's are Red
4. Wait 11 Seconds.
5. Ensure Converter blips Green LED (1 second on, 50 milliseconds off)
6. Reset is complete.
7. Remove Power
